

ΕΦΗΜΕΡΙΣ:

O R,

ADIRY

{ASTRONOMICAL,
ASTROLOGICAL,
METEOROLOGICAL.}

For the Year of our LORD,
1673.

PRESENTING,

I. The Planetary Motions, Aspects and Ecclipses : Together with the usual Furniture of other Almanacks, as Terms, Tides, &c.

II. The Figure of the World, and Judgment thereon; touching Sickness and Sanity, Plenty and Penury, &c.

III. The Genitures of those Three great Ornaments of Learning, and honor of our *English* Nation, viz.

{ Mr: *John Selden,*

{ The Lord *F. Bacon,*

{ Sir *Kenelm Digby* Kt. }

Made publick for the advantage of Artists, and illustration of Astrology.

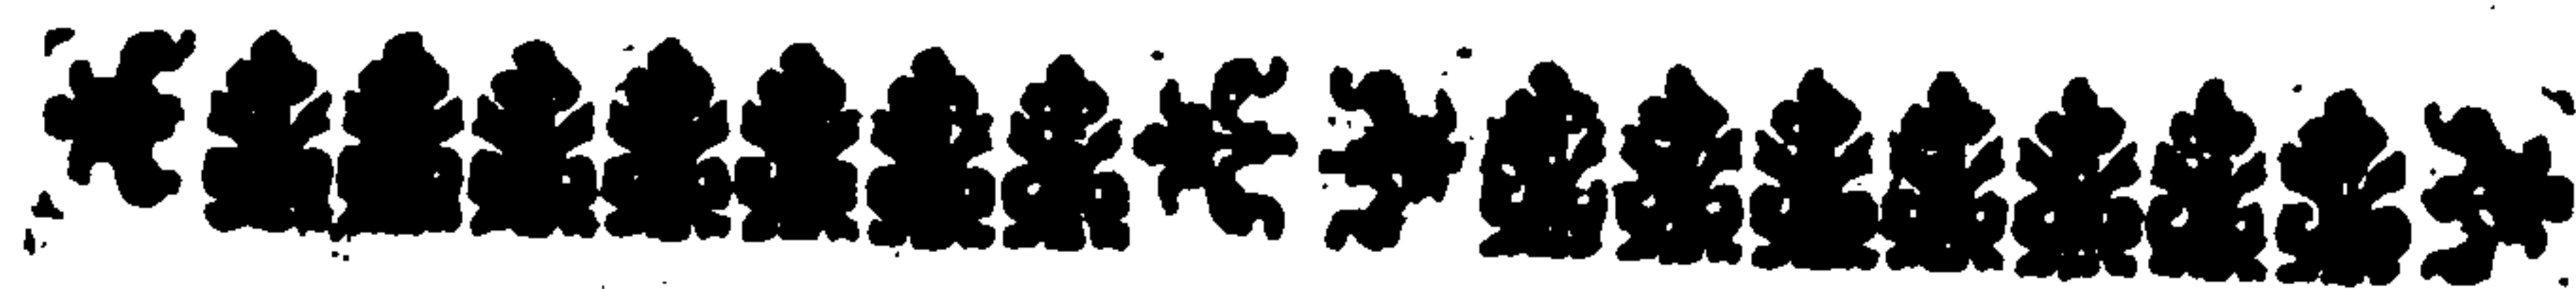

With a Catalogue of all the Monarchs which have reigned over Great *Brittain*, since the time of K. *Edgar*.

By *JOHN GADBURY* Φιλομαθηματικος,
Student in Physick and Astrologie.

— Sed regit astra Deus.

Ars vera est, sed pauci artifices reperiuntur.

London, Printed for the Company of Stationers.

To his most Ingenious, and singular-
ly approved good Friend, Mr.
Noah Starling of Reading, in
the County of Berks.

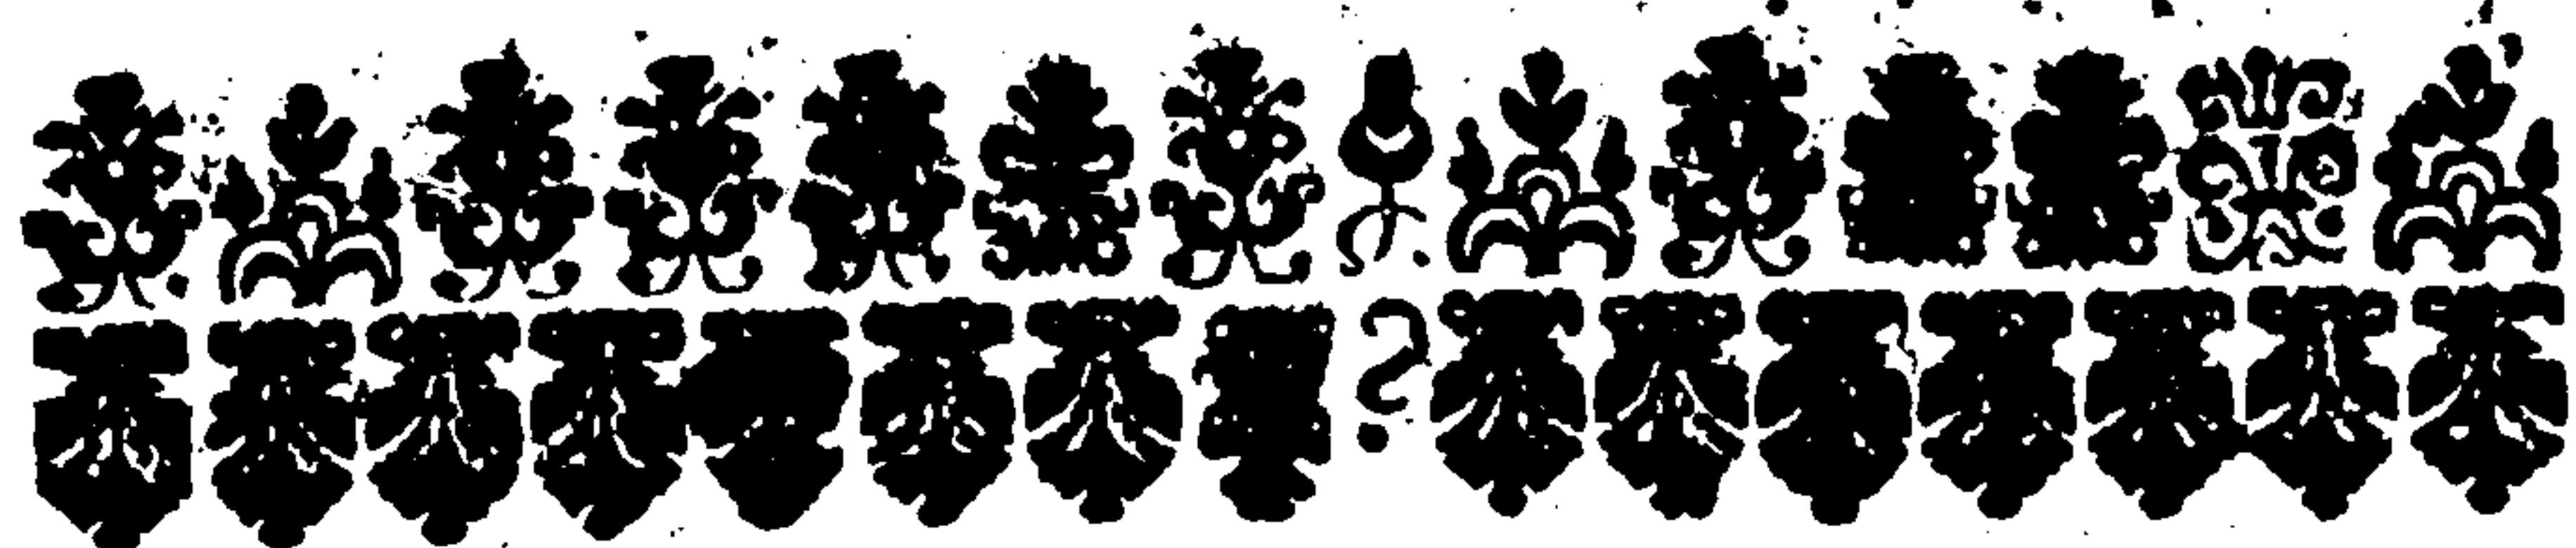

SIR,

If you please but to call to mind, how that above *twenty years* since, (to say nothing of *after favours* and *Civilities*, which ought to hold any man, pretending *Ingenuity*, as firmly obliged, as *Hand, Seal, and witness*;) you were so active and Studious a Friend, not only to *Astrology*, but to me an unworthy Propagator thereof, that you refused not to become a Partner with me in the procuring to be Printed, the first Pamphlet that I ever wrote on that Subject; you will not be surprized at the finding of your Name at the beginning of these few sheets of Paper, as a Patron to him, that you had formerly, in kindness, been a Partner with-
all.

You had the honor of, being acquainted with the Study of the Stars before me, (and in saying so, you know, that I do neither Romance or Flatter.) but your more weighty Affairs have prevented (not your Affection and Inclination, &c. but,) your perseverance therein: which is indeed. an unhappiness more to *Astrology*, then to your Self, It having missed such support from your nimble and Active Genius (you having a ♀. admirably fitted for an enquiry after Celestial Truths,) which very few are able to befriend her with.

From your more eminent occasions, be pleased to plunder (in this case it may be lawful) an hour for perusal of this contemptible Brat, that thus comes to kiss your worthy Hands, and to tell you that there is not any of your Old Acquaintance that hath a greater value for you, then—Sir, your most affectionate Friend and Servant.

JOHN GADBURY.

TO THE READER

Be he either *Friend*, or *Enemy*, to
Astrology, or to my *Self* an
unworthy defendor
thereof.

FOR somewhat in my Epistle to my Ephemeris, Anno. 1671.
I hear, I have bin subject to the Censure of sundry of the
Sons of Learning: who have, it seems, deem'd me too torwards
being no Academician my self, to propound how Learning may be
advanced. Let me be bold to Apologize, and premise together.---
That I would not be thought so presumptuous, or over-weening, as
to pretend in any thing I am able to perform, to direct or Instruct
the Learned; but on the contrary, do most willingly submit my
self and Labours to their Politer Judgments and Censures.

Nor am I so fond or foolish to believe, that all the Learning
in the world Rests in Astrology. I know, there are not less then
Six Liberal Sciences besides it; and more than twice six Laudable
Arts on them depending And yet I know too, that all knowledge
may be better'd by it.

And, if in that Epistle, I have attempted any thing that is but
seemingly different from the common Road of the Schools, (I do not
know that it is.) I have not done it by way of Affront to them: or
to any of the truly Learned; my Business was only to Promote and
Advance the Truth; which ought to be (if it be not,) the Prince-
ly Mark, at which all mens Studies should Aim.

TO the READER.

I would not willingly be tryed by the Prejudice of any man, that
being a Judge, that knows not how to be Just. But, I dare
become Appellant to the Reason of any Learned and Ingenious
person, (Friend, or Enemy, to the Art I Study to support.) whe-
ther I have bin guilty of any thing in that Epistle, or in any other
of my Labours published, that may so much as but probably injure
the Judgments or Reason of any in the lower scem of the worlds
Academy. Much less the higher.

To give my vote for the advance of Science, as I am a Lover
of the Muses, is, I hope, No Treason against the Gown or Pur-
ple. And in that Epistle I have done no more. And, let me be be-
lieved (I pray you) when I say I honor Learning, though I have
not the good fortune to be honor'd by it.

I labour'd under the ill Influence of Luna ad Quadratum Jovis,
& M. C. ad oppositum Lunæ, when I was but young: and was
pull'd from the Breasts of Minerva before I was eleven years old.
Nay, I had Saturn, in the Oriental Quarter of my Genesis. And
give me leave to tell you, that my Education having been below
my Birth hath prov'd Astrology true.

I know this age is swel'd almost into a Dropsy with Notions of
all kinds: yet, should be sorry to think, the Humble Reasons which
I offer'd on the behalf of Astrology, should meet with such enter-
tainment as might Oblidge me, to conclude them Disrelished only
by Surfeited Judgments, or, that the Genius of the Times
should be so Rickety, as to Grow big at that which was intended
for its good, but never to disturb it.

What though I am no Graduated Schollar? Nay, what if I
understood less of Science then I do? A single vote (though mean)
hath sometimes sav'd the Truth. A blind man may have a veneration
for the Light of the Sun. And the Oxe in the Fable, thought it
no dishonor to be assisted by a poor contemptible Mouse.

How have all Sciences been abused in this latter Age? How have
all Sciences been improved? It is pittty that Knowledge should do
injury. And yet such is the Fate of things, that it sometimes doth
so. But the Fault is not in the Thing it self, but in the misapply-
ing of it. Optima Corrupta Pessima. All Stomachs convert whol-
some Food to Poyson.

And thus I have observed, that our English Law-books, have
not only generated great Swarmes of Solicitors, but by their
means, many Strifes and Controversies also; to the great prejudice
of

To the READER.

of Persons and Families, which were before in quiet. Books of Physick are so common in our Mother Tongue, that I know many, who can scarce Read; and many more, that cannot speak sense, mounted up thereby to the honor of Doctors, in that severe and Elaborate Study: whose Patients, even humane Nature commands me to pity: it being surely a much greater misfortune to fall into the hands of such Doctors, then any disease (say the Plague it self) can be unto them.

I spare to mention how Divinity, the Queen or Mistress of all Learning, hath fared [by sundry profane and Atheistical tracts, that bold intruders into that Sacred Profession have published. But these are ills, that may be sooner Lamented than amended.

Astrology, among the rest, hath not escaped pollution. For we have a sort of Fellows, petty Chymicks in this Science, that notwithstanding their Ignorance and unfitness for such matters, will be dealing therein, (and in Print too) even to the extracting the very Blood and vital Spirits out of that excellent Learning. My business therefore for many years past, hath been, and at present is, and in that Epistle was to inform such Persons that are apt to be dealing with that abstruse Art, how to avoid abusing, either themselves or it. It is not in this Study, as in the Promises of the Gospel: the River of this Science is not Navigable to all Persons. Elephants may indeed swim here, but lesser Creatures, Men of smaller Intellects, must have a care of drowning. 'Tis not common or ordinary for Crows to attain unto the strength of Eagles. And although such as know the road need no instructor, a guide is necessary to the Ignorant.

And if I have not been a faithful Monitor to this sort of People, who are daily, not only running themselves into Errors, &c. But even rendring the Glory of the Stars Cloudy and Maculous; let the Learned be my Judges. I abhor to be Censured by such as know not Venus from an Hog.

From the mutable and degenerate practices of some pretended Astrologers, I know many Learned men have thought too cheaply of Astrology. But the fault is not in the wine if Persons be intoxicated, but in their Ebricous appetites. Let them take but the abuse of this Art from the good use thereof, and they will then see reason to put an Eminent value upon it. — And so far I humbly request to become a remembrancer at least, unto this sort of Learned Persons that they would distinguish between the true wine, and the Dregs

To the READER.

Dregs; and not reject a known speculative Truth, in case they find it joyn'd to an Error in practice. For it was purely to reform the abuses practised under pretence of Astrology, and to rescue this Noble Science from an Ignorant and profane handling, that I wrote that Epistle, so much censured, and yet so little minded: and that I have so often in my works referred myself to the impartial and unerring votes of the Learned. And as in any thing past, so in every thing I shall for the future, make publique, will most readily abide by the same. And I should be Glad some others, calling themselves Astrologers, would not be ashamed to do the like. —

I am, (Gentlemen) yours, &c.
(being still a real honor-
er of, and searcher after
true Science.)

From my House, in Brick-
Court by the Deans-
Yard. Westmin.

JOHN GADBURY.

Of the Luminarian Eclipses this Year. 1673. &c.

IN this year there will be celebrated but two Eclipses, and both of them of the Sun: The Moon passeth cleer from suffering any such defect, because those of the Sun are Central, as is well observed by the Learned Hecker, out of Keplers Epit: Astron: lib 6.

The first Eclipse of the Sun happens on Thursday, February the 6. day; about our 8. a clock at night, and therefore not to be seen of us, because both the Luminaries will be beneath our Horison. But unto such who inhabit the Longitude of 56. degrees Westward from us, it will be Total; it happening so near the North Node of the Moon; and will appear exceeding dark or black for the time, according to Appian, who neatly treateth of the colour of Eclipses.

The second Eclipse that this year happens of the Sun, will be Celebrated on Saturday, August the second, about our nine a clock in the Morning, but will be scarcely seen of us, by reason of the Moon's Latitude and Parallax. It is possible, some small part of it may be observed toward the end thereof, on the South-East side of the Sun; but it being so little, it will very hardly be discernable in our British Horison.

This later Eclipse, though invisible to us, may be seen in the Atlantique Ocean, and in the greatest part of *Africa*; as also by such as pass the Arabian and Indian Seas. But because that neither of these defects are likely to be much visible unto us, I spare all further discourse thereof.

I As a Demonstration of the great perfection Astronomy is arrived unto in this our Age, all ingenious Persons may be pleased, on the fifth of *November* this year, an hour or two before the Sun rises, to observe a famous Conjunction of Jupiter and

Of the Eclipses this Year.

and Mars, in the East, in four degrees, &c. of Scorpio, a little to the Southward of the shining Stars of the Ballance. This Conjunction will be Ecliptical, almost, the Planets Latitudes being the same; and Mars will go near to hide a great part of Jupiter from our sight.

I commend it to the endeavours of the Sober Astronomers and Navigators as being the Persons most fit to improve so noble a Phenomenon.

I And, because past Observations in Astronomy are as serviceable to the Industrious Artist, as any to come, I will here acquaint him, — That on *November* the seventeenth 1671. Being Friday about six in the Morning, (it being then a curious Starlight, and calme Air.) I observed the Moon in Conjunction with the Virgins Spike. It was a Conjunction so near, and withal so pleasant to behold, that, according to common vision, the Moon seemed to touch the said Star; or the Star rather, to hang upon the Upper Horn of the Moon. I could tell you also what Glorious effects it portends unto all those that have that part of Libra, either Culminating, Horoscopical, or the places of the Sun and Moon in their Genitures; and that there are some in the world, I exceedingly honor, that are eminently concerned therein. But, I do not covet to be esteemed Gnathonical, or can I glory in the Name of a Parasite. Both which (and perhaps worse) Epithetes I should be forced to undergo, although, I were certain, I wrote nothing but the truth, should I divulge them.

Besides, I am (for reasons hereafter given) at present out of a humor for general publique Prædictions; and cannot tell you whether ever I shall trouble my self again with that part of the sydereal Science; All my Study and pains being at present employed about my Body of Astrology, which I have so often promised to the world; and begins now to appear in a shape somewhat suiteable to my mind and likeing: as I hope it also will, to the truly Ingenious and grateful Sons of Art, for whose sakes I principally give my Self the great trouble of its Compilement.

Each *Man* by *Nature*, *Son* of *Passion* is;
And seldome can bright *Reasons* *Scepter* kiss,
His *wit's* *Anomalous* to what is good;
His *Reason* oft' by *Harrying Fates* withstood.
Thus then, we see, the excellent use of *Law*,
's to keep *Men just*; their *Rebel Passions* *Awe*.

January hath xxxj. dayes.

I'me come again, my Readers hands to kifs;
And once a twelve-moneth, Court I such a blifs.
The last year I appear'd lo moustrous black,
(Thank my kind Printer!) in my Almanack;
Fair Ladies they were frighted! others took
Me, for the Fellow with the Cloven-foot.

Observations.

If Occidental Planets are mo-
vers of the west winds, we may
be sure to have them liberally
stirring in this month.

Why may we not expect an
Ague fit in the Macrocosme, be-
tween the twenty second and
twenty sixth days of January?
I mean, a probability of great
winds and Rain.

If the Prediction prove true, I
may acquaint you with the Mete-
orological cause thereof another
year.

February be h xxviii. days.

My matter was so Martyr'd, I scarce knew,
(When once I went my harmless Brat to view;
Whether 'twere mine or not? and yet I thought,
My Printer had not with the Fancies wrought,
To change my Child. for here and there I found
My Image silly'd, but ah! no where found

First Quarter 14 day, at 9 in the morning.
Full Moon, 21 day, at 1 in the morning.
Last Quarter, 28 day, at 11 before noon.

Eng. Acc.	Rom. Acc.	Lunar Aspects.										Full Sea Lond. br		Observations.
		☉	☿	♂	♂	♂	♂	♂	♂	♂	♂	H.	M.	
1	11	☉	☿	♂	♂	♂	♂	♂	♂	♂	♂	10	12	
2	12	☉	☿	♂	♂	♂	♂	♂	♂	♂	♂	11	0	
3	13	☉	☿	♂	♂	♂	♂	♂	♂	♂	♂	11	48	If Saturn in Aries occidental,
4	14	☉	☿	♂	♂	♂	♂	♂	♂	♂	♂	0	30	denotes great winds and cloudy
5	15	☉	☿	♂	♂	♂	♂	♂	♂	♂	♂	1	24	Air, as say some Astrologers,
6	16	☉	☿	♂	♂	♂	♂	♂	♂	♂	♂	2	11	[☉ Eclipsed invisible.]
7	17	☉	☿	♂	♂	♂	♂	♂	♂	♂	♂	3	10	(nay, I know none that deny
8	18	☉	☿	♂	♂	♂	♂	♂	♂	♂	♂	3	48	it) this month will generally
9	19	☉	☿	♂	♂	♂	♂	♂	♂	♂	♂	4	30	be cloudy and windy. If any
10	20	☉	☿	♂	♂	♂	♂	♂	♂	♂	♂	5	24	show falls, (much it cannot be)
11	21	☉	☿	♂	♂	♂	♂	♂	♂	♂	♂	6	12	it will be at the beginning of
12	22	☉	☿	♂	♂	♂	♂	♂	♂	♂	♂	7	0	the month, or else about the
13	23	☉	☿	♂	♂	♂	♂	♂	♂	♂	♂	7	48	or 10. days thereof.
14	24	☉	☿	♂	♂	♂	♂	♂	♂	♂	♂	8	36	
15	25	☉	☿	♂	♂	♂	♂	♂	♂	♂	♂	9	24	Great store of winds (and
16	26	☉	☿	♂	♂	♂	♂	♂	♂	♂	♂	10	12	those of shifting place) at the
17	27	☉	☿	♂	♂	♂	♂	♂	♂	♂	♂	11	0	latter end of the month.
18	28	☉	☿	♂	♂	♂	♂	♂	♂	♂	♂	11	48	
19	29	☉	☿	♂	♂	♂	♂	♂	♂	♂	♂	0	36	I could (almost) adventure
20	30	☉	☿	♂	♂	♂	♂	♂	♂	♂	♂	1	24	to predict a petty Hurricane, the
21	31	☉	☿	♂	♂	♂	♂	♂	♂	♂	♂	2	12	last day of this month; but if it
22	32	☉	☿	♂	♂	♂	♂	♂	♂	♂	♂	3	0	fall the 1. of March, I would
23	33	☉	☿	♂	♂	♂	♂	♂	♂	♂	♂	3	48	not be too severely censured.
24	34	☉	☿	♂	♂	♂	♂	♂	♂	♂	♂	4	36	
25	35	☉	☿	♂	♂	♂	♂	♂	♂	♂	♂	5	24	
26	36	☉	☿	♂	♂	♂	♂	♂	♂	♂	♂	6	12	
27	37	☉	☿	♂	♂	♂	♂	♂	♂	♂	♂	7	0	
28	38	☉	☿	♂	♂	♂	♂	♂	♂	♂	♂	7	48	

March ha h xxxi. days.

The Pious Clergy I am made t' abule;
By that my Book, the Sunday can't be known,
From common week days, Oh! but *whist!* my Muse.
Perhaps thy Printer's Anabaptist grown.

Your Pardons Rev^drend Sirs: I Penance do
For others Faults. Let me be cleer'd by you.

Observations.

If Saturn's Orientality and Position in Aries be sufficient to contend against the Occidentality of ♈, ♊, ♋, and ♌, and three of them posited in Gemini and Libra, then will the Eastern winds at this time be Rampant, otherwise the Western winds will prevail.

And, if in these matters it be lawful, to conclude, that not the Eastern but the Western winds will be prevalent. And two notable fits thereof this month afford, one at the beginning, and the other about the 18. or 20. days.

May hath xxij. days.

The generous Merchants, and the Tradesmen too,
For want of apt distinctions, are disgusted
By that my Book. alas! what shall we do?

If those prove treacherous whom we entrusted. † habent
To Print them by our Copies? Now I find, sua fata
Even Books † have fates; but mine, one most unkind libelli.

June hath xxx. days.

Physicians cannot find right Critick Dayes;

No true Lunations doth to them appear:

The Moons place, and her aspects, many wayes

Are strangely faulty throughout all the year.

But Learned Gentlemen, the fault's not mine,

My Grapes was good; the Vintner spoild my wine.

Observations.

A Probability of the North-west winds now to be (more than commonly) stirring: and this may be better News to the Merchant (in case it prove true) then my Predictions of the Fears of the King of Spain, or the Acts of the Grand Seignior or Prince of Transilvania, &c. (having no ground in Art or Nature for it) would be to the world in general.

Good Reader, remember to observe it, if I tell you, that toward the latter end of this Month, Heavens will be more than ordinarily Cap-suck, and weep too before Saint Swithins Festival.

July hath xxxj. days.

The pretty *School-boys*, that were wont to look
With pleasure, on my harmless-little-book
Do now with indignation throw me by;
Because they can no *Saints-days* there descry.
Be quiet *Juvenilians*: I ne're thought
To spoil your *Play-days*. 'twas my *Printers* fault.

August hath xxxj. dayes.

The sober Husbandman hee's angry too,
And tells me to my face, he cannot find
In all my Book, one Page is Printed true;
The New Moons Full, and Quarters all are blind:
And in such Sooty Figures Printed be,
As if † Mul'd lack had done the work for me.

† A Chimney-sweep-
er, eminent some
10 years since in
London.

September hath xxx. Days.

Then the wife *Carper*, he *exults* and tries,
To trap me in a hundred *several* wayes:
All *this* is *false*! and *this*! and *this*! and *all*!
Oh! here's our true *Astrologer*! he'll baul.
Be silent *Sirrah*! You, I have no mind
To gratifie, — Your *Scommas* are but Wind.

C 2 OC

October hath xxxi. Days.

What should I do in such a Case? my mind
 Unto a thousand several thoughts inclin'd.
 To Execrate my Injurer, I deem'd just:
 But Heavens Chancery whispering, said, I must
 Forgive my Enemies. --- I was to blame:
 The Man that spoil'd my Book, can't spoil my Fame.

November hath xxx. Days.

Yet prejudice unsought for, claims a due
Reward from him, who thereby's injured:
He that commands forgiveness, sounds a wo
Gainst those that give offence. --- Then, let him read
Nought but the Books he Prints. [If all like mine,]
And Plague enough he'll meet in every Line.

1	11			*	*		4	36	The Easterly and North- easterly Winds are this Month chiefly prevailing, whence we may expect the Air to be somewhat cold for the most part; but not extreemly rigid and violent; here being no vio- lent Configurations of the Stars to cause any eminent Turbulency. The double remove of Mercury, together with some particular transits, are herein the most Cogent; as also the shifting of his Orientality.

December hath xxxi. Days.

Now, of the *Learned Reader* I desire,
(And, of the *vulgar honest one* require.)
That he would pass by, what he has found amiss,
And lay the blame even where the Error is.
I hope in this year, I amends have made;
I'm sure on't: if he pardon what I've said.

Observations.

The Easterly Winds are
like to be most stirring this
Month, and a windy moi-
sture is generally signified,
together with a fall of
some snow.--And, if it come
not on the *Quadrate* of
Saturn and Mercury, the
Quadrate of the Sun and
Saturn will certainly
bring it; and I conceive,
the 19. or 20. days, will
be remarkable for a change
of weather.
-- Observe judiciously.
-- Censure sparingly.
And so thou wilt en-
courage me to a further En-
quiry after the Truth of
these Matters, Vale.

What part the Moon governs in Mans Body,
being in any of the twelve Signs.

♈ Head and Face.

♎ Neck and Throat.
♊ Breast, Stomach, & ribs.
♋ Bowels and Belly.
♌ Secret Members.
♍ The Knees.

♊ Arms and Shoulders.
♋ Heart and Back.
♌ Reins and Loins.
♍ The Thighs.
♎ The Legs.

♏ The Feet.

A Distich on the twelve Signs, and their several Significations.

♈ Head, Throat, Arms, Breast, Heart, Belly, Reins do greet,
♊ The Secrets, Thighs, Knees, Legs, and th' Active Feet.
♋ Mans Head and Face, Heavens Ram obey;
♌ His Neck, the Neck-strong Bull doth sway;
♍ Th'arm-twining Twins guide Hands and Arms.
♎ The Breast, and Stomach, Cancer charms.
♏ The Lyon rules our Back and Heart;
♐ Bowels and Belly's Virgo's part,
♑ Reins, Haunches, Navel, Libra friends;
♒ Bladder and Secrets, Scorpio tends.
♓ The Half-hors'd Bow-man claims our Thighs;
♈ Unto the Kid our Knees suffice.
♉ Our Legs are but the Butlers Fees,
♊ The Fish our Foot-steps oversees.

When I consider the Heavens, the works of thy Fingers, the Sun
Moon and Stars which thou hast ordained: what is Man that thou
art mindful of him?

Ο Ρ,

OBSERVATIONS

Astrological and Physical,

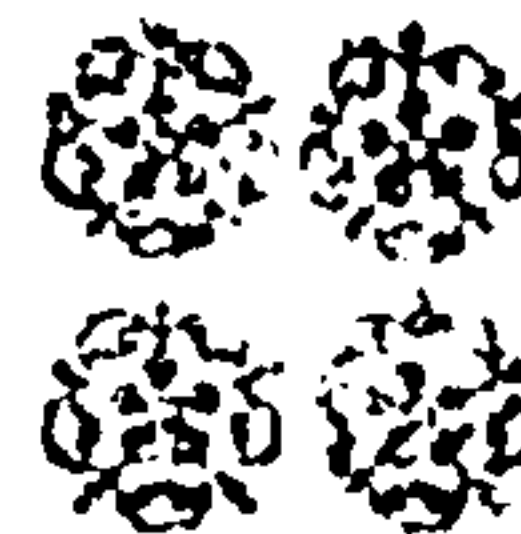

On the Year of our Lord,

1673.

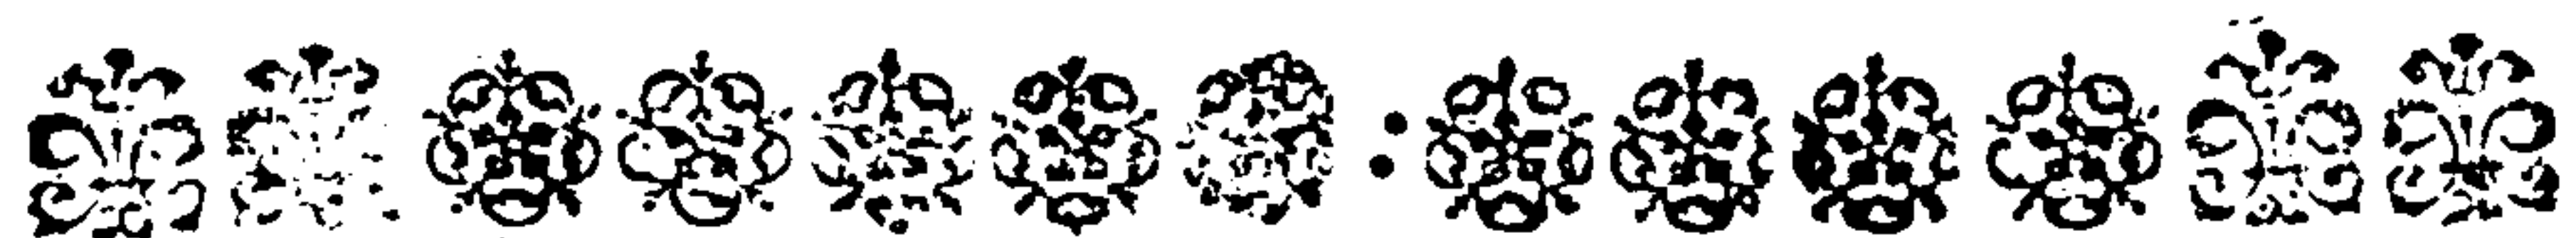

With sundry Instances and Experi-
ments of Cœlestial Influences.

Humbly submitted to the Approbation
and Censure of all Persons.

By JOHN GADBURY, Student in Phy-
sick and Astrology.

London: Printed by J. C. for the Company of
Stationers, 1673.

Observations on the Year of our Lord 1673.

HAVING in my *Almanack* or *Ephemeris*, for 17 or 18 years last past, made it my great *business* to consult the *significations* and *intentions* of the *Stars*, in publick *general accidents*, as well to our *own* as other *Nations*, and thereby endeavoured the *Instauration* of *Astrology*. And, although my *Predictions* in all *those years*, fairly grounded upon the *genuine Rules* of *Art*, have been made *happy* with a *suitable success*; thereby clearly proving the *Principles* of *Astrology* to be *firm* and *good*, sufficient to satisfy any *reasonable Opponent*: Yet, being unwilling to inherit the name of a *Latitudinarian*, [because in general *Predictions* the *Astrologer* hath a *large Field* to walk in; and unless he be the *honestest*, may obtrude strange things upon the *Reader*, and yet seemingly colour them with an *Aphorisme* unduly interpreted] and finding *Interest* and *Opinion* to bear a great *sway* in the *Regency* of the *World*; and that my *Judgments*, when once in *Print*, (especially in relation to matters of publick tendency, and wherein the *Noblest* of *Persons* and *things* are concerned; viz. *Government*, *Law*, *Religion*, *Sects*, *Consti-*

Year of our Lord, 1673.

Constitutions and *Customs*. *Wars*, *Inundations*, *Earthquakes*, &c.) are apt to be wrested, as the *Sybils Oracles*, to a *sinister purpose*: And that many will needs endeavour to extract that out of them, which was never by me intended to be so much as once in them. And also, that *Parties*, *Interests* or *Nations*, or *Societies* of *Men*, shall have no *just reason*, for the future, to reflect any word or passage upon themselves or concerns, that may, in such a way, drop from my Pen.

I resolve (I say) for time to come, to limit myself to such *matter* as shall prove *inoffensive*, and yet be found useful to my *serious Readers*: whom yet I must desire not to think too cheaply of *Astrology*, for finding this *alteration* in my *method* and *manner of writing*. It is not because I distrust the *Rules* of *Astrology* that I forbear; for I aver an absolute and *unerring Verity* in them, as they were left us by the *Antients*: And by them fairly interpreted; I have (through Gods great blessing on my endeavours) been enabled to predict sundry *admirable truths*, many of which are yet fresh in the memory of the ingenious *Lovers* of *Art*; which not for ostentation or vain glory, (for I esteem nothing of shadows, or of an airy Fame; I could willingly impart with my right therein, to any that are covetous of it) but for satisfaction to the *World* of the excellent use that is to be made of *Astrology*, do I make the following *Catalogue* of some of them. Viz.

Observations on the

- 1 The Death of *Oliver Cromwel*, in my Almanack of 1658.
- 2 The Deposing of his Son, in that of 1659.
- 3 The Catastrophe and Death of the Illustrious *Charles Gustave*, King of *Sweden*, in *Merlinus Verax*, from his Geniture.
- 4 The Restauration of the late most Excellent but suffering Prince, the King of *Denmark*; and the additional Honour he received by his Kingdom being made Hereditary, which before was but Elective: In *Nuncius Astrologicus*, from his Nativity; as also in my *Collect. Geniturarum*.
- 5 The Relief of *Copenhagen*, when closely besieged by the *Swede*; under the Name of *Mons. Fr. Missonne*, for some particular reasons.
- 6 The Death of *Alexander Septimus*, in that of 1665. and in my *Collectio Geniturarum* also, from that great Prelates Nativity, fol. 75.
- 7 The Death of the late King of *Spain*, in my *Collect. Geniturarum*.
- 8 The Retreat of the *Turks*, when they so hostily invaded Christendom, and made *Germany* to tremble, 1664. *Vide Dies Novissimus*, or *Dooms-day not so near as dreaded*.
- 9 The increase and abatement of the late great Plague, which swept away not less then an 100000 persons. Yes, and a greater Calamity then that. See my Discourse of the three Comets,

Year of our Lord, 1673.

mets, and that Tract entituled, *London's Deliverance* predicted. *Cum multis aliis*, &c. as may be seen in my Annual Books, and other of my writings, not proper (I must acknowledge) to be re-mentioned by my Pen.

And (heark thee good Reader) when I say I predicted these things, I do not lay any Title or Claim to Prophecie; I am not (I confess) spiritualized enough for such matters: I live by meat and drink, and the rest of the *sex non naturales*, as do other Mortals. And an Astrologer hath no occasion, in his Predictions, to pry into God Almighty's Secrets, or to pretend himself a Prisy Councillour of Heaven. He hath the Stars and Elements, both *Cælum* and *Solum*, to contemplate and study for his assistance. And he that considers effects, as they lye imbodied in their proper Causes, and deduces his Predictions from laudable Topiques; as he needs not the glorious Epithete of Cælestial on the one hand, so he shall never deserve, on the other, to be esteemed a dealer with the Devil. [Albeit, I must needs say, and I am troubled that I have occasion for it, that some in these days calling themselves Astrologers, have taken great pains to be thought Witches; or, at least, somewhat more then their Art will either own, or permit them to be.]

And it pleaseth me, that I am able from my own experience to assert, that the farther any Artist shall wander from the Rules of Astrology, the farther still he shall straggle from the Truth; and consequently

Observations on the

frequently shall render himself and Science the more abject and ridiculous. To shun the Censures therefore, that some others greedily pant and thirst after, I will, I say, alter my Scene for time to come.

Define Mænaios, jam define, tibia

* M. Ogilbyes
Virgil.

versus,

Now * Pipes no more, play the
Mænalian Strain.

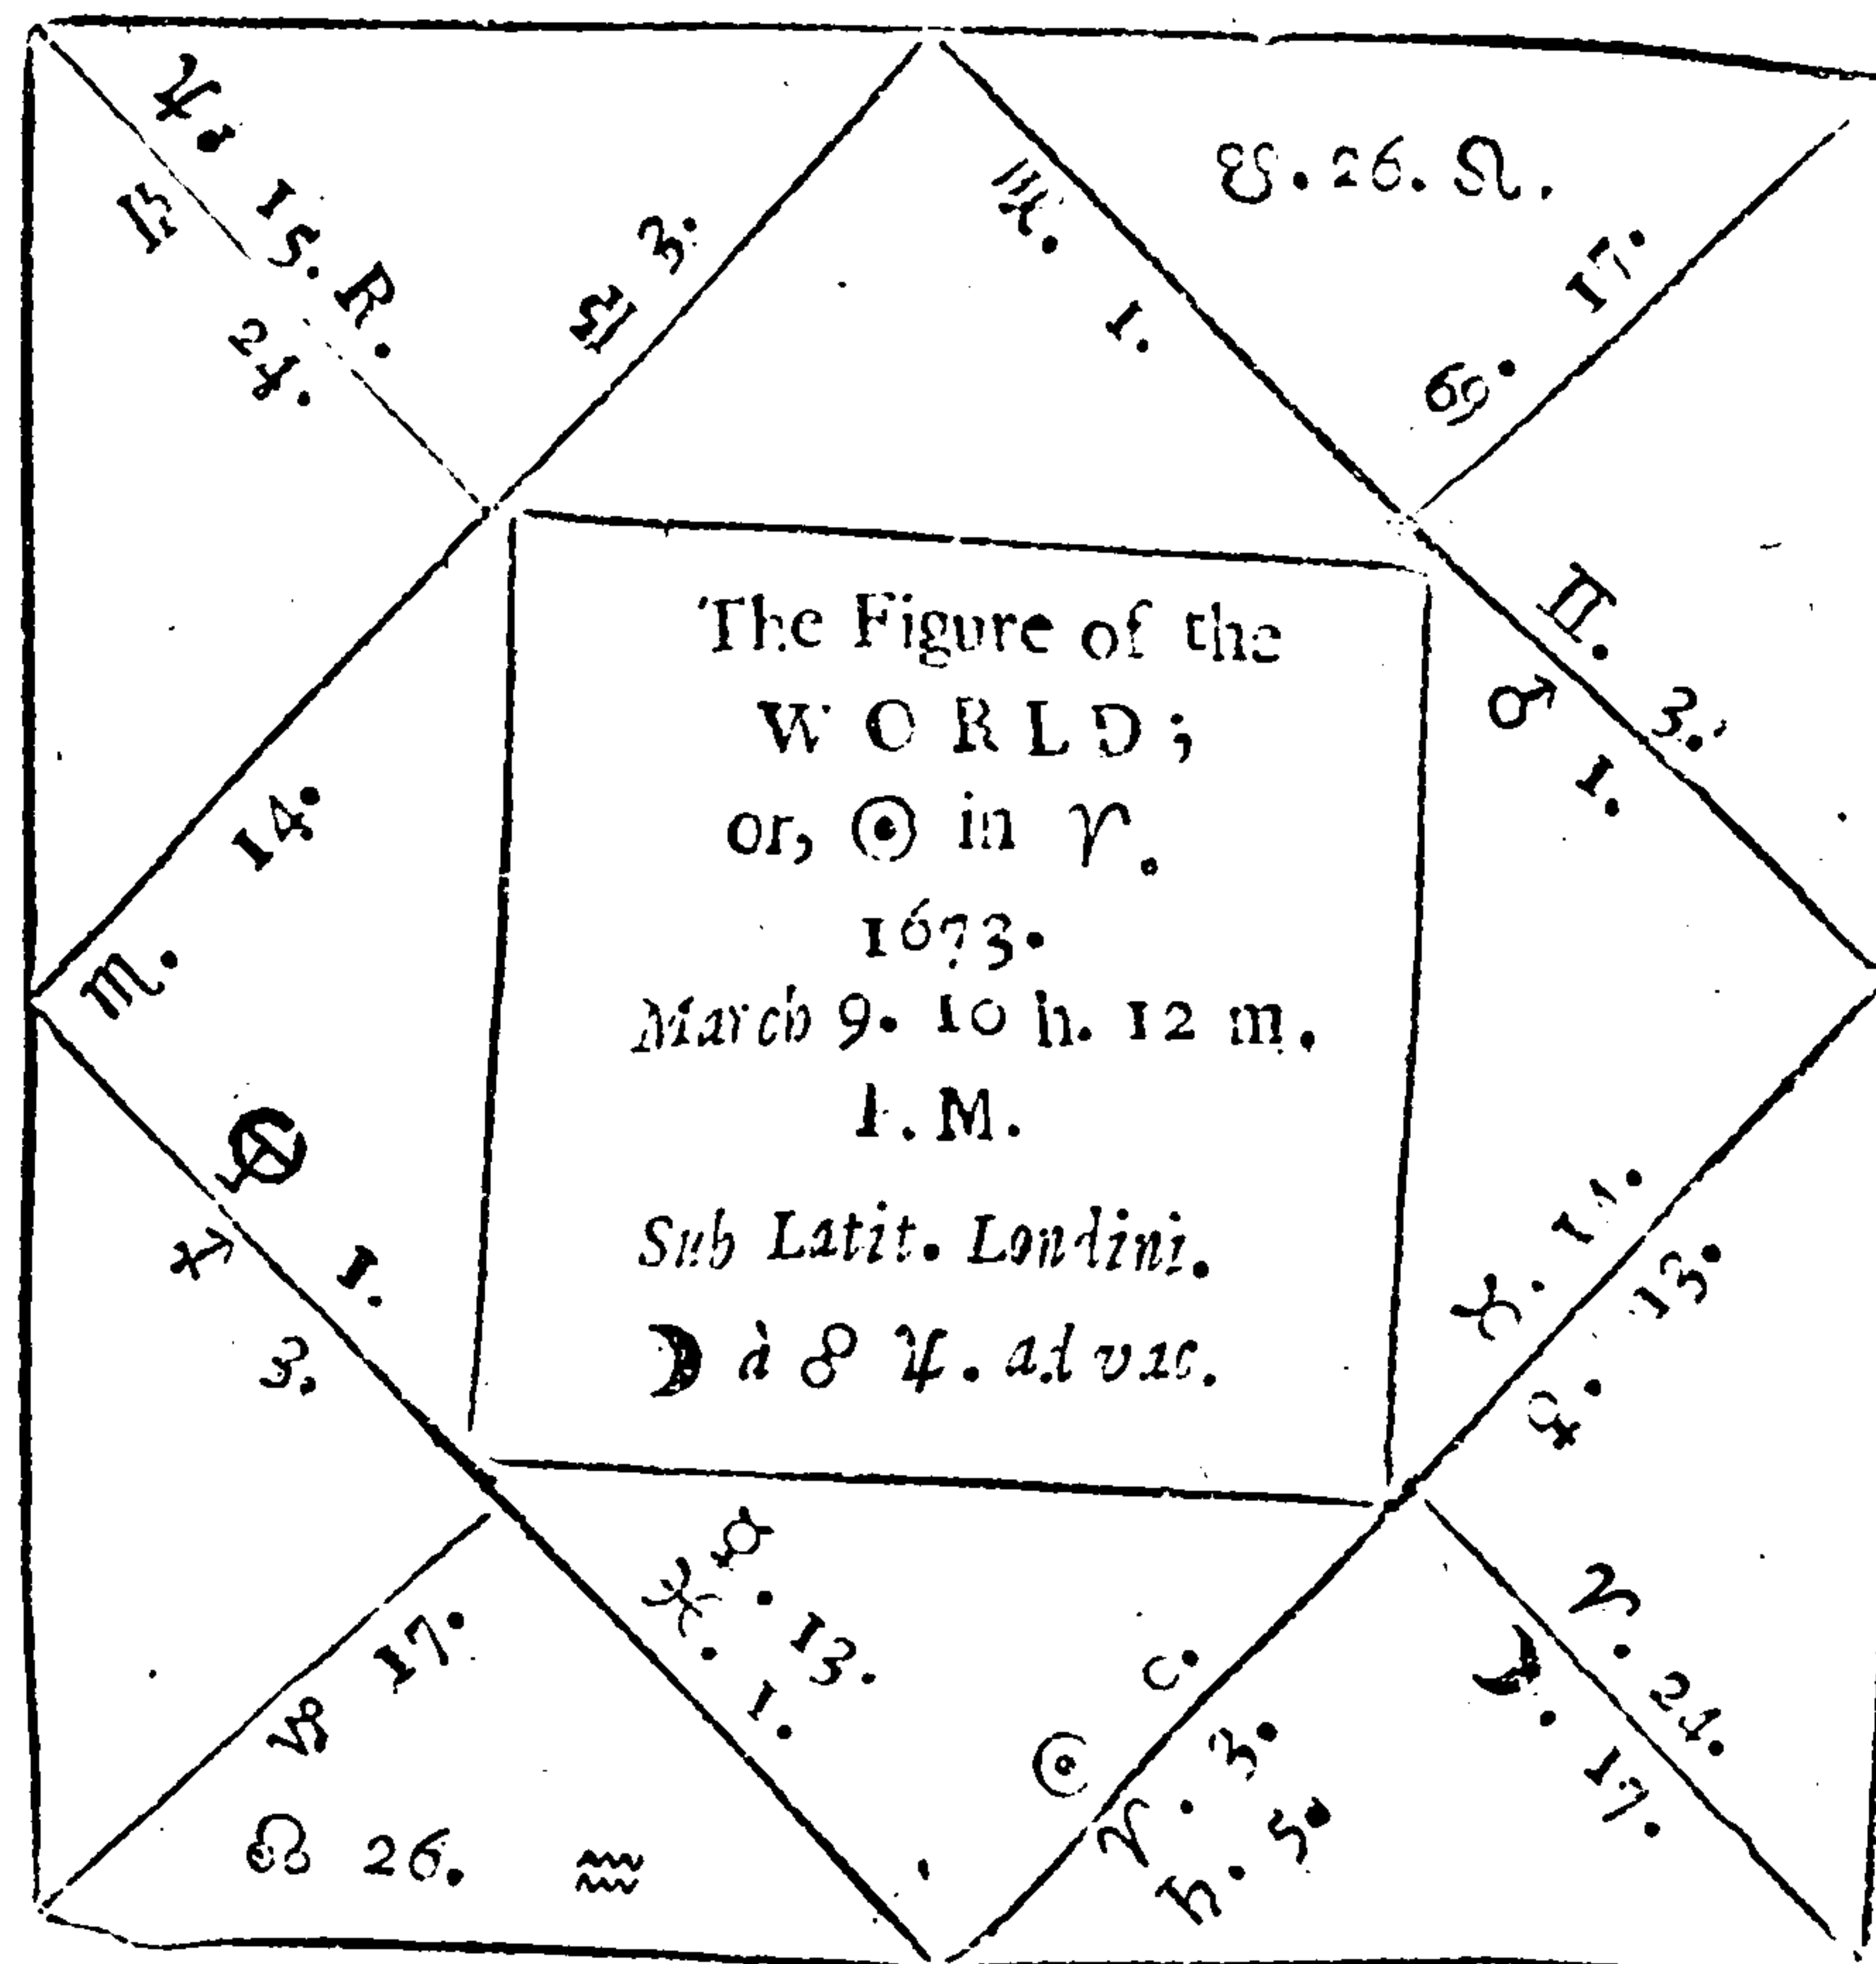

Howbeit, although I thus resolve to leave off all Predictions de generalibus accidentibus Mundi, &c. I doubt not but to finde such matter, in consulting and examining the Starry Influences, for to furnish my Almanack withal for the future, in relation to sickness and sanity, barrenness and fertility, &c. and such other useful subjects (that may thence occur to me, for the use of the Country-Gentleman, Farmer and Husbandman, not totally forgetting the civil Citizen, the sober Student, and generous Merchant, &c.) as may be worthy the ingenious Readers pains of perusal. And so I humbly assume liberty to begin.

The signe ascending the Horoscope of this our Vernal Scheam, being fixed, declares the Figure it self significant to last for the whole year round.

In the Figures Preventional and Postventional to this our Mundane Figure, there are some things of a pleasant and duicid nature, others of cross and rugged import; which I shall tacitly minde in my discourse on this particular Theam of Heaven, as they occur to my use.

There

Year of our Lord, 1673.

There is no Reception essential (I mean by House or Exaltation) in the whole Scheam. What shall I say? Men will this year be very loath to confide or put faith in one another. O utinam! I wish I saw reason to say otherwise; there will be no true-heartedness among them: Tongues cross and contradict Hands: Many fair pretensions appear, where foul intentions are privately lurking. & the only friend in this year, is also our private Enemy, and by position and relation, our publick Foe in earnest. Unhappy and unhappy people may some-

Observations on the

times be *smiled* to *ruine*; nay, to *death* it self.

And although M be a signe of Craft and Subtily, and J in II not much behinde in *such matters*; yet it will now be more *policy* for men generally to adhere to the *gravity* of h , and to the *honour* and *justice* of \odot [do you not see that \odot and h behold the Lord of the year, and the Lunar Horoscope with amicable Rays?] then to attend the *beats* and *passions*, *treacheries* and *projections*, that J and Q his *Dispositor*, do now both irritate and signifie.

A *prudent observance* of some sorts of things, annex'd unto a *just* and *honourable acting* of others, is the best *caution* for men generally to minde all *this year*: They will finde it more and greater profit to *practice taciturnity*, then *confidence* and *garrulity*. *Tacere non nocet*. But I come to consider

Of Sickness and Sanity.

One Planet is sole Lord both of the *Ascendent*, *fifth* and *sixth Houses*, and he posited in the *eighth House*; as if men should by *Surfeits*, *Riots* and *Excess*, &c. bring *divers deplorable diseases* upon themselves, many whereof will certainly (unless God otherwise check and over-rule the Energy of second causes) *terminate in death*. I am afraid his being there, in J to the Lunar Horoscope, viz. \odot from airy and fiery signes, together with the V her being posited in V , so near the Cusp of the *sixth*, will occasion some *raging distempers* this year in the
Head,

Year of our Lord, 1673.

Head, *Miseraicks*, *Bowels* and *Secrets*, too *hard* and *knotty* even for many *learned Physitians*, unacquainted with *Astrology*, to understand; much more *difficult* must they therefore prove to the *vulgar Medick*, or *common Emperick*. [Mistake me not, when I say such Diseases will prove *too hard*, &c. for the learned Physitian; I mean only, that they will prove *too hard* for his good fortune to discover, not for his *learning* to cure.] And here, by the way, give me leave, I pray you, a little, for *Demonstrations sake*, in this most useful matter or subject (*mens lives being herein concerned*) to digress.

The *insides* of men are as different as their *outsides*; and their *minds*, *affections* and *humours*, as various as their *faces*, occasion'd from their *divers temperaments* and *constitutions*; the exact and proper reason hereof, is nowhere to be found or read, but in *Astrology*: And if *Physitians* know not the right reason of these differences, let them be otherwise never so *learned*, it is impossible for them to prescribe or administer convenient or apt *Medicines* to their *Patients*, except by accident. And how unbecoming such a way of prescribing is to a man of *ingenuity* and parts, let the *learned* of the world judge.

The person well skill'd in the *Principles* of *Astrology*, must therefore be concluded the *fittest Physitian*; none being so properly able to remove the effect, as those that are acquainted with the cause.

Is any troubled with the *Stone*, the *Gout*, or any other

other dangerous infirmity? Consult his *Nativity* if thou wouldst cure him; and examine by that, whether he be afflicted thus from the *Beams* of *Saturn* or *Mars*, or any other *Planet*, and suit thy *Medicine* for cure accordingly.

There is no disease so obstinate, but by apt applications in apt times, may be removed, else the study of *Physick* were vain. But if thou fightest blindfold, thou mayst as soon strike thy *Friend*, as buffet thine *Enemy*; thou mayst oppress *Nature*, instead of opposing the disease.

And thus have many persons, meerly through the want of *Science* in their *Physitians*, been made miserable, in the room of meeting a cure. Some, to my knowledge I speak it, of a slight *Gonorrhæa*, have come to loose their *Noses*, when others labouring under the same distemper, with ten times greater symptoms of danger, have escaped without damage. Some again have been wrack'd and tortur'd with the *Stone*, *Gout*, &c. many months, nay years together, [when the *Galenist* with his *Vegetative Physick*, or yet the *Chymist* with his more generous *Extracts* from *Minerals*, have not been able (for want of knowledge in the *Stars*) to do them any good:] while others that have laboured under those crucifying diseases (by *Astral* means) have had ease in few weeks, sometimes days.

The knowledge of *Heavenly Influences*, is the only *Weapon-salve* that can cure at a distance. There are *balsamick Atoms* emitted from the *Stars*, as well

as corroding ones; but this, according to the times they issue thence, or *Beams* they are directed by. And oh! that the learned *Physitians* (who have the charge of mens lives in their hands) would not only not neglect the study of the *Stars*, but make use thereof.

It is not for nothing that the Great *Hippocrates* of old, and the Learned *Galen*, his Follower and Commentator, and the Polite *Riverius*, and Learned *Sennertus*, of late years, have reprehended persons professing *Physick* for ignorance in *Starry Influences*.

Should a *Physitian* administer but *Saturnine Medicines* to a *Solar* or *Lunar Patient*, and at a time *Saturnine* too; I aver it, that there will then be, plus peric. à Medico, quam à Morbo, &c. more danger from the *Physitian*, then disease; he will sooner kill, then cure. And it is not without reason, but from an excellent *Cælestial Warranty*, that the *Astrological Physitian* considers the amities and enmities of the *Planets*. Quicquid ligat ♀, solvit ♂; quicquid ligat ♂, solvit ♀, saith *Hermes*, Aph. 27. If you would cure the diseases of ♀, make use of the *Medicines* of ♀; if of ♂, then apply *medicaments* of ♀.

Neither let any *Enemy* to the *starry virtues* tell me, that I hereby injoyn him a large task and trouble, &c. but let him rather consider the great business he attempts or undertakes, viz. the life of *Man*. Besides, I will assure him, that the trouble

Observations on the

ble is *nothing*, or at least not *much*, to any that understands *Astrology*; which I am sure *many*, nay *most of the learned Colledge of Physitians do*: which *Honourable and Venerable Society*, as I highly value, so I would not have the *world* believe, that I hereby intend to render *mean* or *invalid*; being assured, that if at any time those *learned persons* seem to disown, or not to make *use of Astrology*, it is rather their *modesty*, then want of *acquaintance* with, or *respect* unto the *Art* it self; and, as knowing the *popular multitude*, do commonly believe a little too *blackly* of it.

And therefore, as I would not have any *learned Physitian* nescious in so *choice a Study*, and so assisting to him in his *practice*, on the one hand; so I would not, on the other, have the *vulgar Patient* to be *afraid* of his *Physitian* for *Astrologies sake*; it being far better to go upon *sure grounds* in any thing, then by *guess*.

Let now but the *serious Enemy to Astrology* (laying aside his *passion, pride and prejudice*) tell me, to what *purpote* we finde the *Earth* adorn'd with all those *various Vegetables*, of as different *colours, tastes and scents*? unless it be to *cure the various maladies* that the *Stars* afflict *miserable mankinde* constantly with: Nay, let him tell me how the *Astral Beam*, that causeth the *distemper*, can be *reverberated*, but by the *Astral Vertue* that is in the *Plant or Mineral*, of which the *Medicine* is made?

And here a *Question* necessary seems to call for an

Year of our Lord, 1673.

an *Answer*; Whether *Chymical or Galenical Physick*, be most *suitable for the cure of Humane Distempers*? I grant the *Question* too great to receive a full solution from my *worthless pen*: or, were it not, *this place* is too *narrow* for me to perform it in. Howbeit, in brief, my opinion is, that *that Physick*, which is most *homogeneal to the natures of men*, is the most *medicinal to them*. Vegetables are the most agreeable to *humane nature*, because *mankinde* is nothing else but *grass and plants carnified*. And hence probably is it, that *Divine Writ* so *Philosophically* describes us, when it says, *Nam omnis caro est gramen, All flesh is grass*: Not but that I have a great honour for the *Chymical Physitian*, if he be but well experienced therein.

We know experimentally, that *Rhubarb*, an herb of *Mars*, is the best purger of *Cholerick humours*; and *Hellebore*, an herb of *Saturn*, is the only herb in the *world* to remove *Melancholy*: So *Borage, Asparagus, Agrimony, Cinkfoil, &c.* being herbs of *Jupiter*, are found admirable in *cleansing the Blood*, and quitting it from all *distempers and ill ferments*; he being *Dominus Sanguinis*. And thus *Rue and Saffron*, herbs of the *Sun*, are found the greatest expellers of *poyson*, and comforters of the *heart, &c.* So *Mints, Pencroyal, Aleboof, Mugwort, Vulvaria, &c.* herbs of *Venus*, are the most powerful in removing *women's distempers*. And so *Elecampane, Fennel, Liquorice, &c.* herbs of *Mercury*, are found *friends to the Lungs, Winder-pipe, and Speech*.

Observations on the

Speech, &c. and so of all the rest: Now this they do by *Sympathy*: They have their *Offices* and *Effects* to perform by *Antipathy* also, which I have not room here to speak of. I shall therefore conclude my *Answer* to the *Question*, and my *Digression* together, and come to the diseases of the year.

Hippocrates, Sect. 3. Aph. 19. tells us, with great reason, *Νοσήματα δὲ πανταχὲν, &c.* That distempers of every kinde do afflict us at all times; but some peculiar diseases are most rife and existent in some particular seasons: And this is the work of the *Astrologer* to discover. Now, mixing the significations of the distempers of the year, the most prevalent will be found these following; viz. *Vertigo, Lethargy, Frenzy, Catalepsy, Apoplexy, &c. Winde, Spleen, Hypochondriack, Melancholy, Plague in the Guts and Intestines, Obstructions in the lower parts of the Belly, &c. Imposthumes, Small-Pox, Yellow-Jaundies, Fistula's, Cholick, together with womens diseases, &c.*

And I must tell you, that the Lord of the M.C. which signifies *Physick* is weak; and though he hap to be moderately well assisted by the * of ♀, yet is he Lord of the eighth Angle. And therefore, to conclude this *Theam*, it is likely to prove an *unhealthful year* in the general, augmented unto by *intemperance and rioting, &c.* as before. So that I am doubtful the *weekly Bills of Mortality* will be found to increase, chiefly about *July*, when ♂ and ♀ come into ♉; and in *August* also, when ♄ passes

Year of our Lord, 1673.

ses over the Moons place, and the opposition of ♄ Lord of ☊. So likewise about the later part of *September*, and all *October*, when ♂ makes a ♂ with ☉, and passeth the ♂ of ♃ and ♅, and he makes an ♂ also. And this also seems exactly to correspond with another *Aphorisme* of *Hippocrates*, which saith, *ἐν φθινοπωρίῳ, &c.* In Autumn most acute and deadly diseases happen to shew themselves, *Sect. 3. Aph. 9.* And lest some persons should wonder why I mention distempers of the *Summer* to appear in this season, I have, besides my *Astrological reasons* rendred, another *Axiome* of *Hippocrates* for my Authority, viz. *Aph. 22. Sect. 3. τὰ δὲ φθινοπωρία, &c.* Many sicknesses, which commonly happen in *Summer, &c.* do sometimes appear in *Autumn.*

Nor will *November* wholly pass away without manifest tokens of ♂ his *Ire*, when he comes to the *Ascendant* of the *Vernal Figure*: Howbeit, I am in good hopes, that in *December* and *January, &c.* when ♄ comes near the *Ascendant* of the year, that the sharpest and most malignant sicknesses will generally abate, and health possess their room. By this short *Discourse*, you may guess how necessary *Astrology* is to a *Physitian*; and how the great *Hippocrates* his general *Aphorisms* cannot well be understood, or made particular use of by any, except they have acquaintance with the *Starry Influences*. Let them be for *Signes and Seasons, &c.* *Gen. Chap. 1.*

*Observations on the
Of Penury and Plenty.*

I should now, in the next place, have proceeded largely to have taken notice of the *Arguments* of Penury and Plenty that the *Figure* of this year affords: But having designed the rest of my paper for some experiments in Art, which are indeed the only things that are wanting for the *Adornment* and *Illustration* of *Astrology*; I must beg my Readers pardon, if he finde me the shorter in my *Observations* thereon.

The *New Moon* preventional was celebrated in the later degrees of *Pisces*; and *Jupiter*, at the ingress of *Sol* in *Aries*, was in opposition of her; and that (you'll say) is not very good. The *Full Moon* postventional, happened in twelve degrees of *Libra*, near the Conjunction of *Jupiter*, and *Spica Virginis*, (and that makes amends for the other.) And although she have an *unluckie separation*, yet she hath no *despicable application* in either Figure; only in the *Vernal Scheam*, (which is the chief of the three) she is void of *course*, and in a signe of *sterility*; and her Dispositor, who is likewise Lord of the *Horoscope*, is in a barren Signe also: Albeit, there is a *fruitful Signe* ascending; and *Mercury*, the Patron of *Ingenuity* and *Activity*, is in *Trine* unto it from another *prolifique Signe*.

Hence, in brief, I conclude, that as the year in general will not be exceeding fruitful, so it will not be very barren or improlifique: It will be moderate in cherishing and bringing forth it's increase; and

Year of our Lord, 1673.

and (from *Mercury's Trigonal Beam*) may admit of an improvement from the industry of the careful and painful Husbandman, whom (non obstante the Moon her being in opposition of *Jupiter*) I would advise to Plant, Plow and Sow, &c. in this year, in such times chiefly, that the Moon is in good aspect of the Sun, *Jupiter*, *Venus*, or *Mercury*; making use of prolifique or fruitful signes for their *Horoscope*, at the beginning of such their painful labours. For this is the way to add Fortune to Industry, and to help forward the powers and operations of the Stars, and to avoid many menaced prejudices: According to that of *Ptolomy*, Cent. Aphor. 8. *Sapiens anima confert Cœlesti operationi, ut optimus agricola arando, expurgandôque confert Naturæ.*

That I have not given you my Authorities at large for these Presages, is only want of room; my paper being designed for other matter, which I hope will not be unwelcome to the ingenious persuser. But for those that desire to see a more Antient and Authentick reason of such matters, then what I have here afforded them, let them read *Haly*, *Bonatus*, &c. in their Chapters upon this Subject, where they may be more amply and fully satisfied concerning the premises. And having first spoken a word or two to the generous Merchant, I shall hasten to my promised Experiments.

Of Merchants and Merchandizing, &c. this year.

It may not be forgotten, how that in my Almanack for the year 1671, I cautioned the gene-
C rous

Observations on the

rous Merchant of several dangers that attended him in that year, for reasons therein given; and that many more of their Ships were then known to be lost by ill weather, and by the Turks, &c. then in several years before, as I have heard divers of them acknowledge. I am sorry I see cause to become their Monitor here again, as I in the ninth induceth me to be.

If the *Dragons Tail* be a Node unfortunate, (as all *Astrologers* agree) it must needs be so to that part of *Heaven* in which it is found located. 'Tis now in the *Angle*, representing *Merchandizing*, and *voyaging by Sea*, &c. and the *Moon*, Lady thereof, is in quadrate to it, and in opposition of *Jupiter*, a Planet that receives *Exaltation* therein; as if many eminent and excellently promising undertakings transmarine by the adventurous Merchant, and generous Mariner, &c. would be begun at desperate and unluckie times, and without sober consideration had unto the position of *Heaven*, under which they set sail: caveat Mercator, &c.

It behoves not only Physicians (as I have before urged) but Merchants also, to understand a little portion of *Astrology*, or else they may come to part with their substance or treasure they know not how; and the Sea or Pyrates may devour that, which they had designed for their Daughters portions, &c. I speak it not to flatter; I have known a Merchant save his Premium-money by observing a Figure of *Heaven*: And there is no man so unhappily necessitated,

Year of our Lord, 1673.

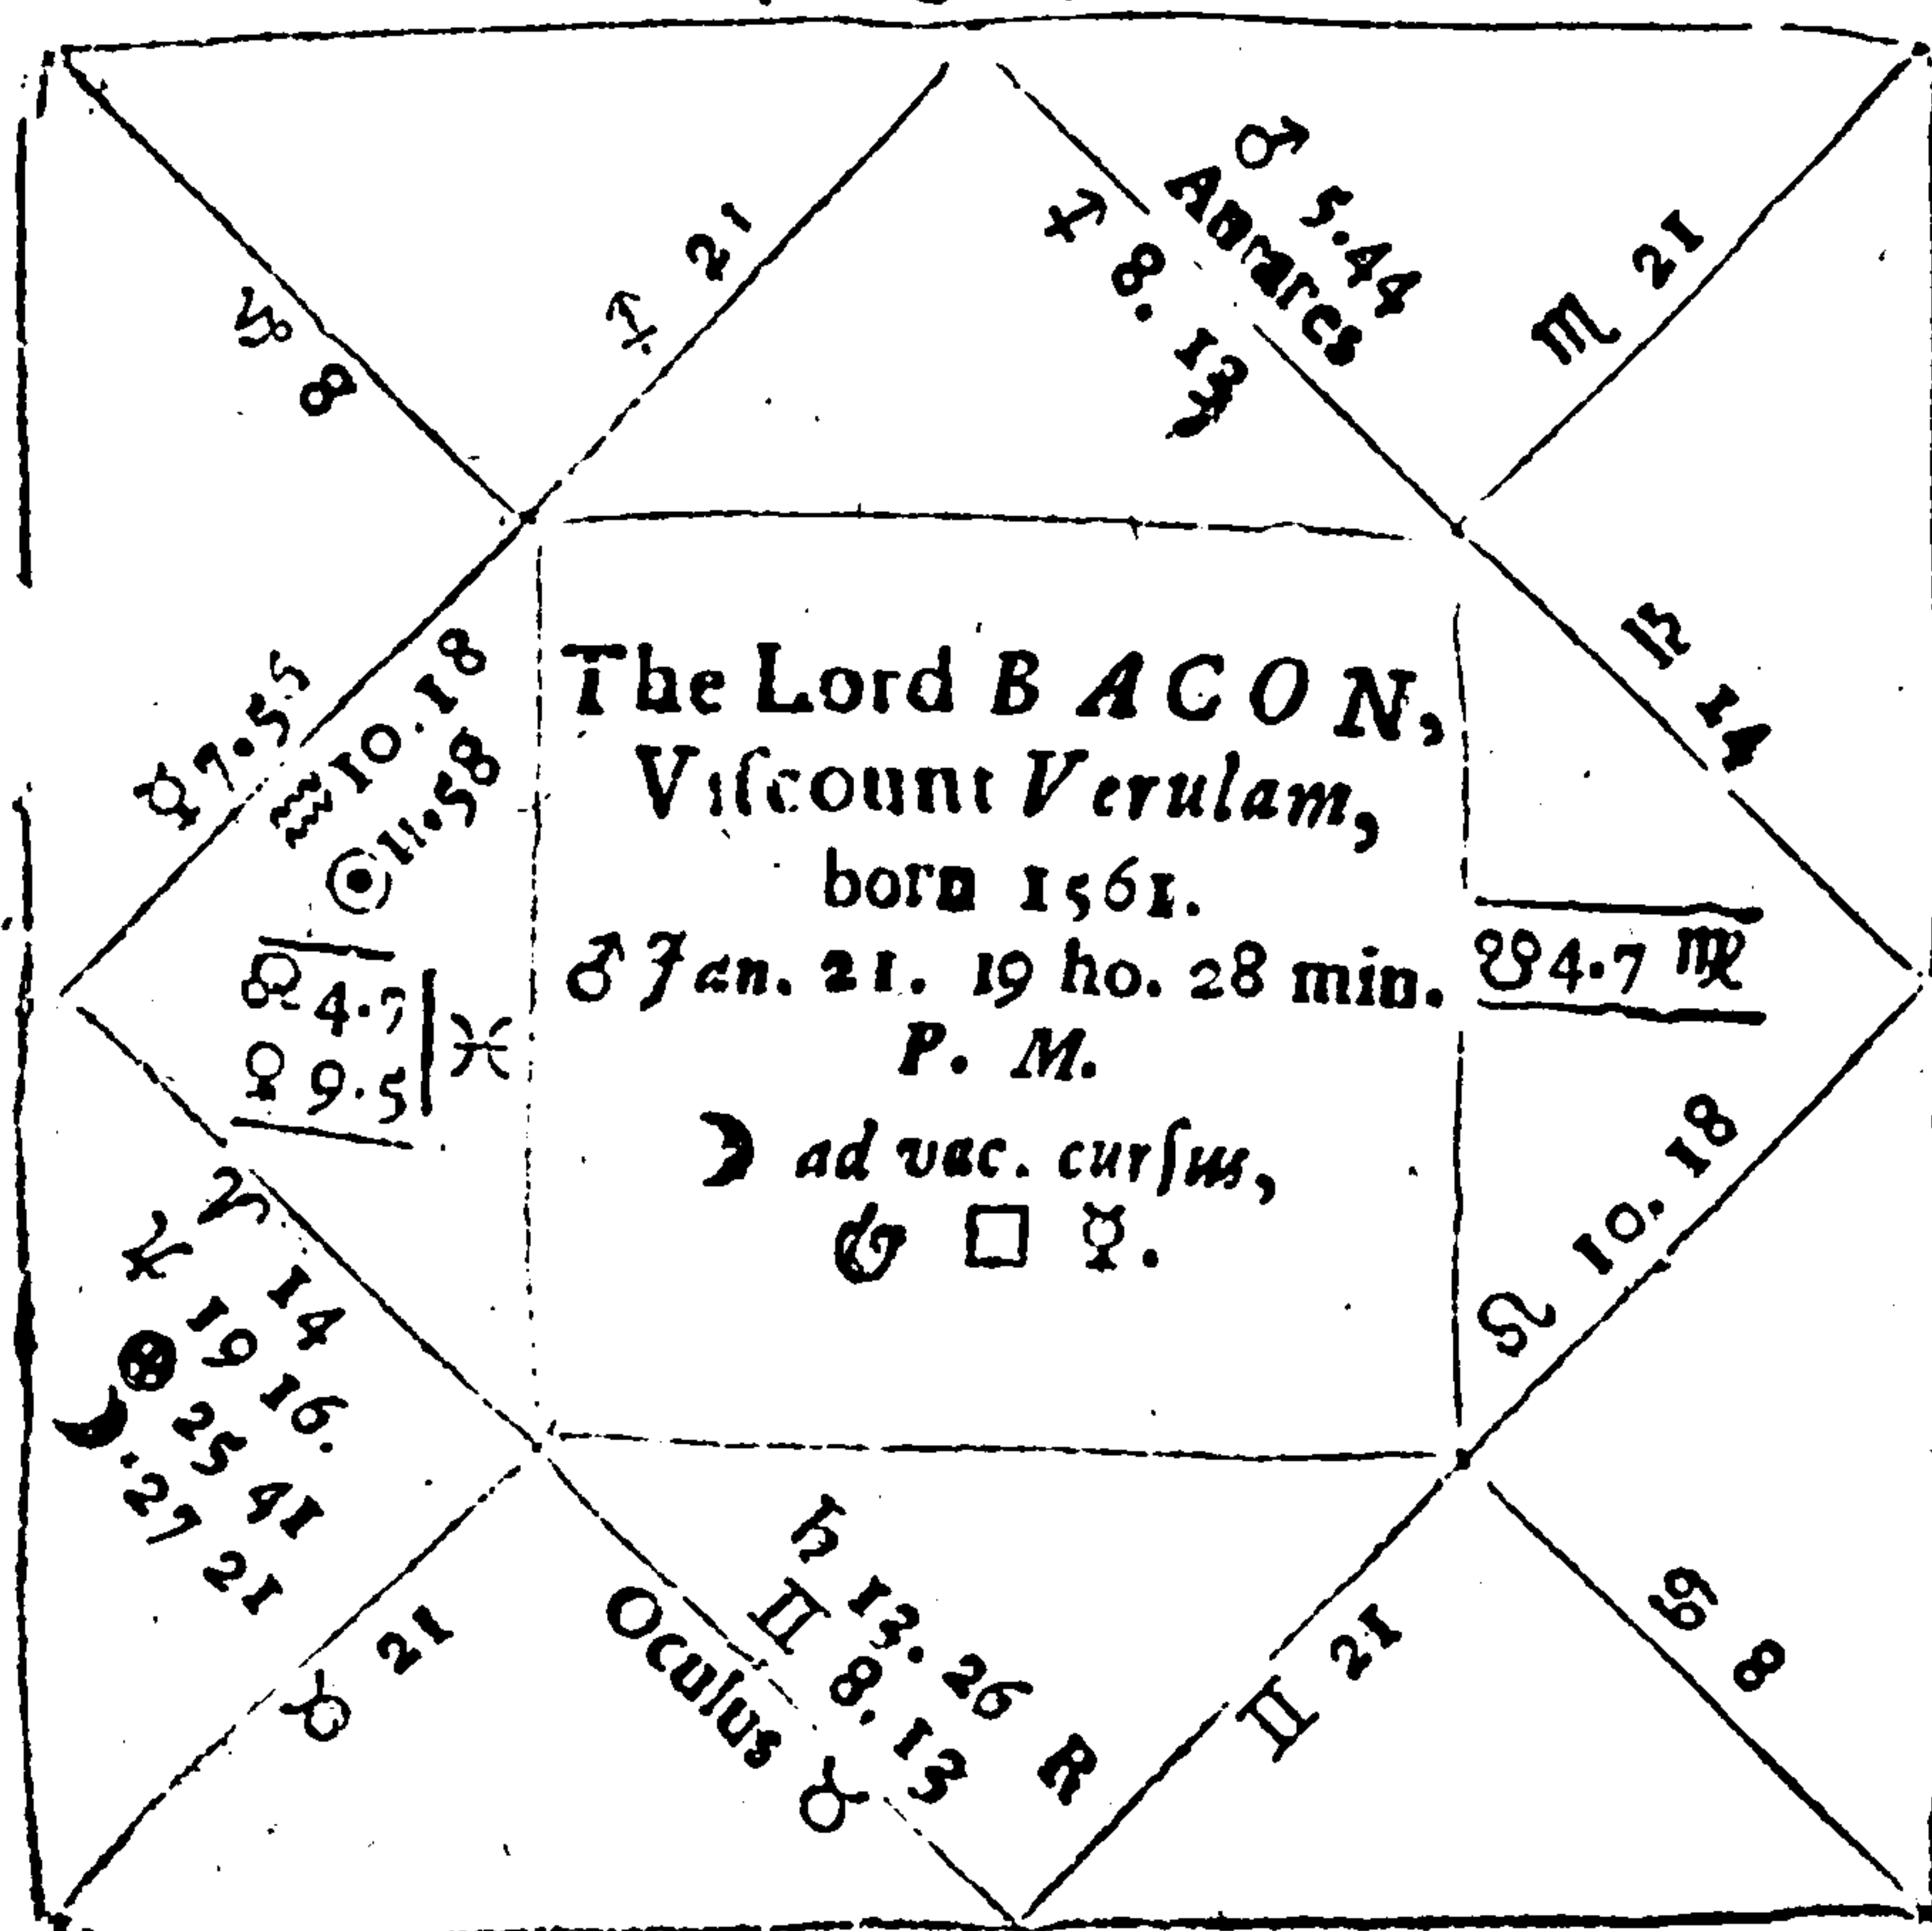

tated, but by a prevision of danger, he may avoid running into it. Nor is there any other natural way for a man to mis-malign his stars, or quarreling at Providence, but by consulting *Astrology*.

We have a little hopes of good amongst the former arguments of danger, and that is from *Mercury's* being in Sextile of *Venus*, and both of them being in favourable aspect to the ninth House, together with the stars of *Auriga* descending thereon, of the nature of *Mars* and *Mercury*: which positions happily seem to animate and whet the ingenuity and industry of many of our English Neptunees and Merchants, to meditate the *Heavens* for their assistance in their weightiest undertakings; and not only so, but intimates them to be successful therein. In a word, I assure them, that it is not diabolical, but very lawful so to do: Nay, I will promise them, that they shall not finde it vain or fallacious, but both profitable and veritable. And this I hope (*savente Dco*) ere long, to make most conspicuously appear to the world at large, by sundry eminent instances and examples: And let me not be believed for the future, if I endeavour to impose upon the world in these, or any other matters; for I would be glad but to see one contradiction to any known and approved Rule of *Astrology*, that I might thence take occasion to renounce the study of the Stars for ever. For I shall never accept of that for a Rule or Theorem, that is true in an hundred things, and erroneous in one: *Axioms* ought to be infalible, (I mean so far only as God Almighty

is pleas'd to permit us an acquaintance with *Infallibility*. &c.) and so I esteem the *Axioms* of *Astrology*.

The *Rule* of *Direction* for *Husbandmen* before given, is also proper and useful for *Merchants*, or persons trading or voyaging to *Sea* in this year; but it will admit of improvement, if the *Nativity* of the *Voyager* or *Adventurer* be consulted and considered therewith. The more *Candles*, the more *Light*. And, *vis unita fortior*.

Some Experiments of Astrology in the Genitures of
the Lord Bacon, Mr. Selden, Sir Kenelm Digby, &c.
246 deg. 27 min.

THESE three honoured persons have been eminent *Shining Stars* in our *Brittish Sphear*, in the times they lived; and their *memories* are yet *grateful* to, not only our *own*, but *other Nations*. And although some of them happen'd to suffer *strange Eclipses*, and *cloudy Fortunes*, at some times of their *lives*, it was no more then what their *Stars* portended; as may be seen by their *Nativities*, which plainly prove the *worth* and *truth* of *Astrology*.

If *Antares*, or the *Scorpions heart*, do well in the *Mid-heaven*, with the *Sun* and *Mercury* their *Sexile* thereunto; the *Bulls eye*, or *Aldebaran* with *Saturn* in the *fourth House*, in opposition of *Mars* in the *tenth*, shew'd an unfortunate *Catastrophe* or *Conclusion*: And so this honour'd *Native* found it by *experience*.

The *Sun* and *Mercury* in the *Ascendant*, declared not only the great *Honour* he arose unto, but the *length of life* he attained.

And although *Saturn* with *Aldebaran*, &c. gave an ill *Exit*, in respect of *worldly pomp* and *glory*; yet the *Sun* and *Mercury*, being in *Trine* of *Saturn*, and the great *reception* that is between *Saturn* and *Mercury*, gave him a *Fame post mortem*; and that so *honourable* and *spreading*, that it will never die. [Suffer me thus to *Prophecy*, or *predict* rather, for once.] And this is very *aptly denoted* to come by the *issues* of his own *Immortal pen*.

Astrological Experiments. 1673.

This Honour'd Native was a Friend, not only to all kinde of *Learning* in general, but unto *Astrology* in particular; as may be seen in all his excellent works, especially that entituled his *Advancement of Learning*.

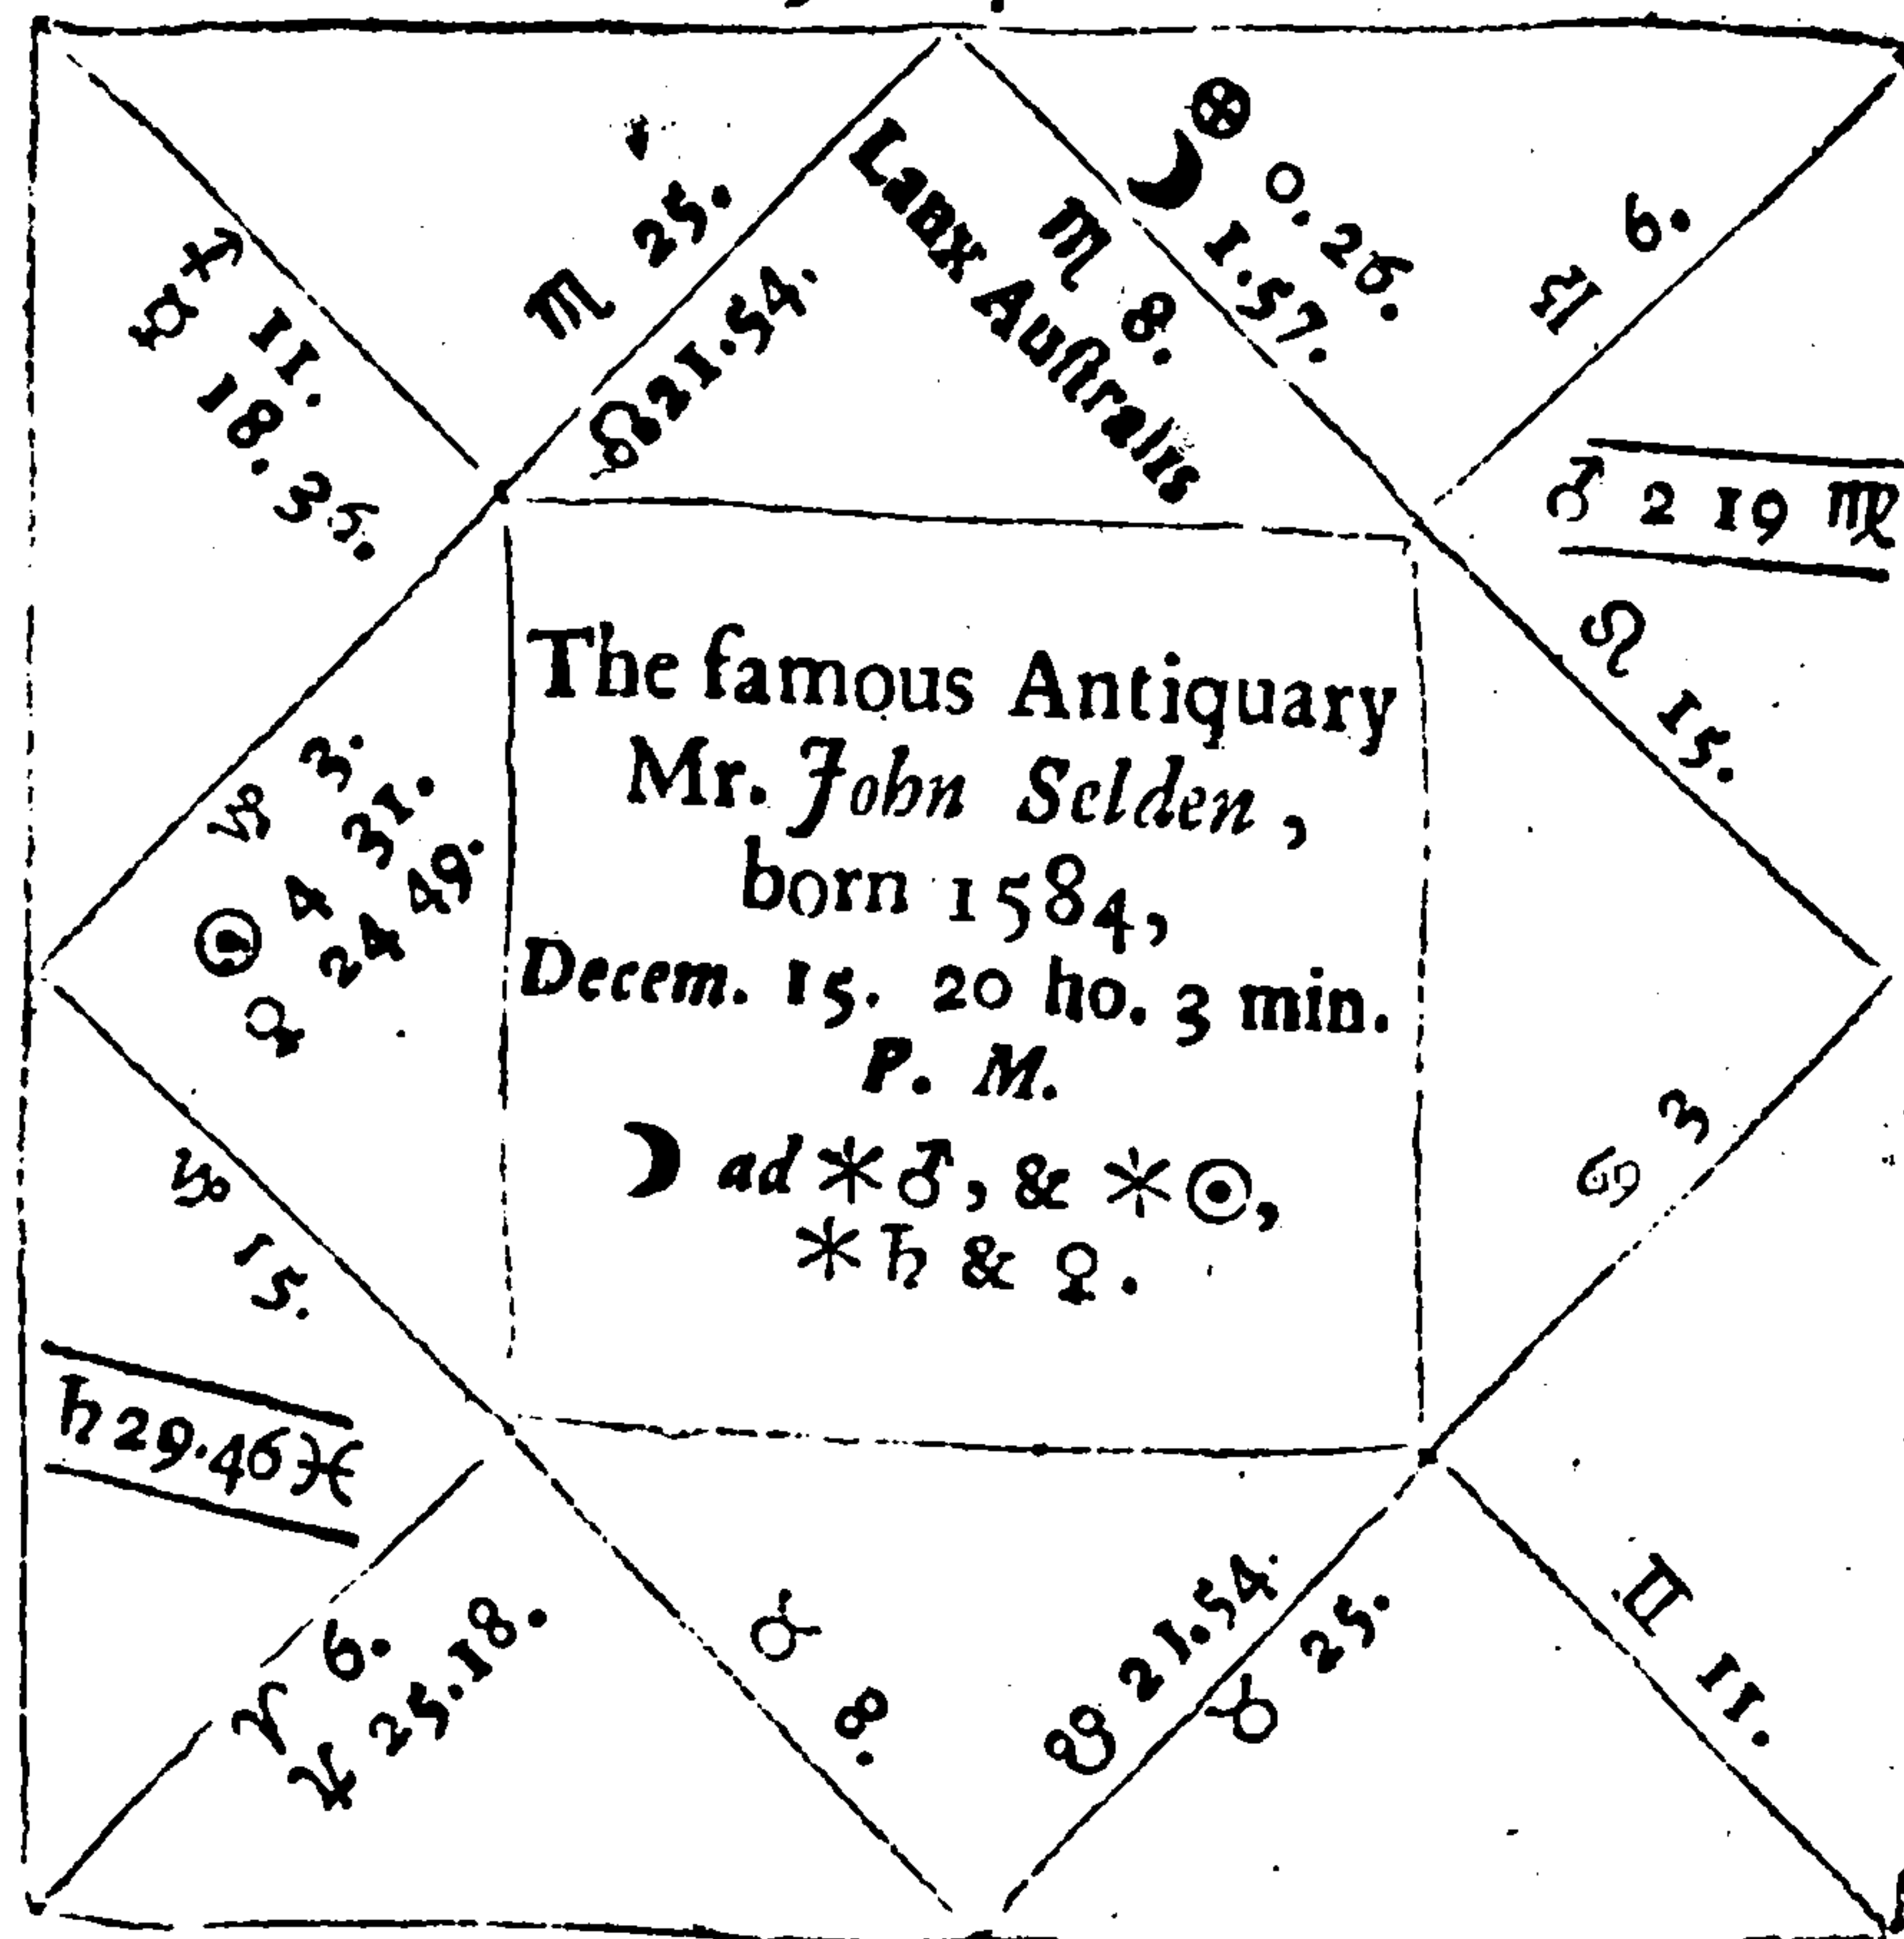

And certainly the *knowledge* of his own *Nativity* could not but add *abundant content* and *comfort* to him in his *greatest cadency*, even *then* when he was the most of all *constrained* to *contemplate* the *incertainty of the world*, and all *humane affairs*, in the *Tower of London*: Sith he could not but *know*, that *Saturn* in the *fourth House*, (under God) especially being in *opposition* of *Mars*, is the *Astrological cause* that all persons, or *Natives* (that have him so *polited*) do *set cloudily*, however they may have *formerly risen* or *reigned*. And of the *truth* of this, I could give you *fundry proofs* and *instances*.

An *Astrologer* knows how to make use of this *Geniture*, although the *owner* thereof be (*inter mortuos*) long since *dead*. And I can tell you, *examples* of this *nature* may befriend an *ingenious Artist*, in *twenty things* and *ten*, that *vulgar eyes* cannot discover.

The

Astrological Experiments. 1673.

215 ho. 41 min.

The *Sun* and *Venus* in the *Ascendant*, are eminent arguments of a *long life*. The *Sextile* of the *Luminaries* almost from *Angles*, denotes a *spreading* and *popular fame*. The *Trine* of the *Sun* and *Mars*, and the *Sextile* of the *Moon* and *Mars*, declare *Honour* and *Dignity*, &c. all which this Eminent *Native* possessed and enjoyed in an *eminent manner*, during his *life*.

He was an excellent person both for *Antiquity*
and *Languages*, as may be seen by his many ad-
mirable

Astrological Experiments. 1673.

mirable Works extant. Hath he not *Jupiter* in *Trine* of *Mercury*, and the *Moon* in *Sextile* of *Mars*, in the *Dignities* of *Mercury*, viz. *Virgo*? But although he was a great *Antiquary*, and singularly well versed in all kinde of *Learning*, yet was he no good *Astrologer*, but unhappily gave his *Vote* against it; as may be seen in his Discourse entituled, *Θεοδωρὸς*; or, *God made Man*, &c. And pray, who is he that ever was a good *Astrologer*, that had *Mercury* in *Sagittary* in *quadrate* aspect of *Saturn*? Neither the Boasting *Heminga*, nor yet any of his deluded Followers, to confute *Astrology*, can give me one just instance.

But the *Field of Learning* is as large as that of *Government*; and many persons can manage a *Batton*, a *City-Sword*, or *Constables Staff*, that are not fit to wield a *Scepter*.

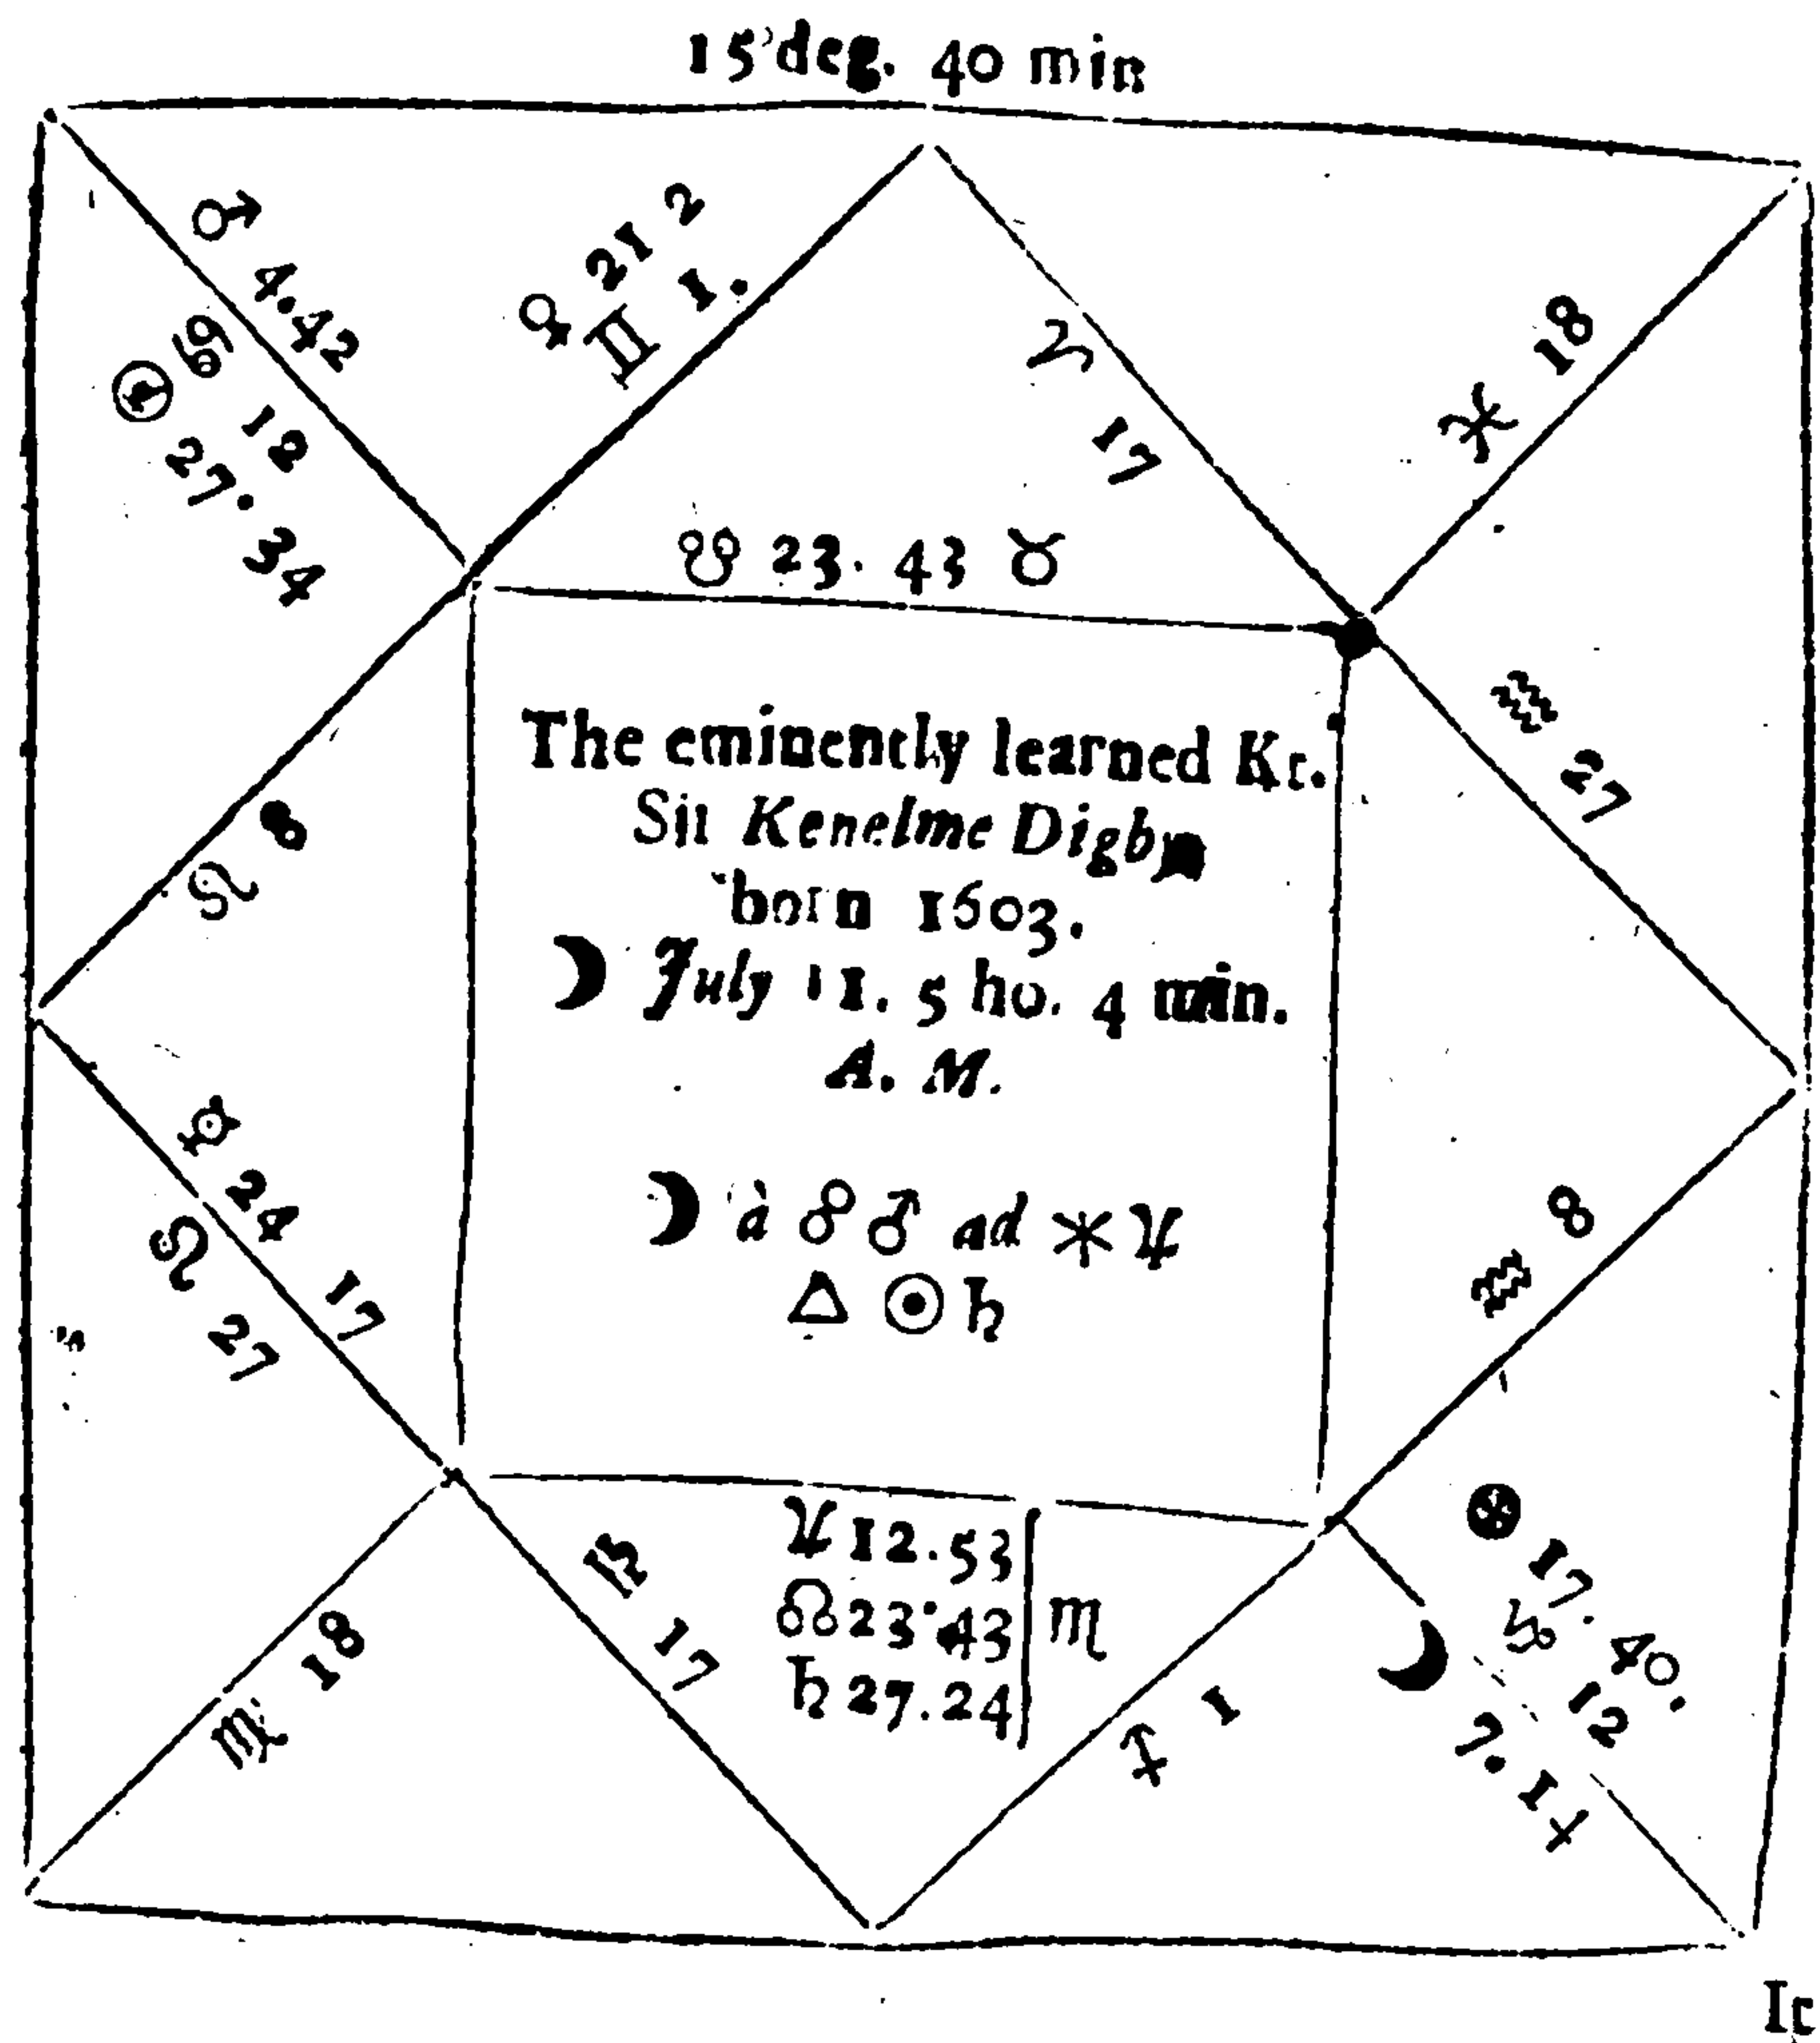

The *Stars* have a beauty and excellence in them, that a darkned *Mercury* cannot penetrate: And a man may be a good *Antiquarian* and *Linguist*, and yet not understand the *Science of the Stars*. And this I am sure can be no disparagement to the memory of this *Learned Native*, whole other parts being so polite and strenuous, makes amends for his defects in this; and therefore commands my honour of him.

If any shall object unto me, that *Mr. Selden* died very rich, and left a vast *Fortune* behinde him, non obstante *Saturnus* in *secunda Domus*: I answer, he is *Lord of the Second*, and in reception of *Venus*, (a great significatrix of *Health*, as here placed)

Astrological Experiments. 1673.

ced) and in *Sextile* aspect of her also; which is a manifest and powerful *Exception* against the general *Rule* that the *Objection* urgeth.

He hath the ☿ *Dragons Tail* near the fifth House, and the *Pleiades* there; together with *Venus* in *Capricorn*, a sterile signe, in *quadrate* of *Jupiter* in *Aries*, a signe impropolifique also. I would fain have any *Enemy* to *Astrology* but tell me, what children he left behinde him to inherit his great riches? that I might thence learn to disbelieve the study of the *Stars*.

It is none of my designe to write any *Eucomiun* upon the Noble Sir Kenelm Digby. His own Pen hath writ his own praise; and the Kingdom of Learning must ever be Debtors to his Merits and Memory.

The Ingenious Artist will soon observe in this Scheme, an ☿ of the ☾ and ♂ from Cardinal Signes, with the ♄ in the M. C. which are arguments of Exile or Banishment; which unhappiness this Native did suffer in the late times of Usurpation: and I must tell you, that, had not the ☿ of ☾ and ♂ been with reception, his prejudices of that kinde had been far more fatal to him.

Here is ♀ in ♍ in ✱ of ♀ in ♀; which notes a person of excellent Speech, great Reading, and an Enquirer into the secrets of Nature, &c. And, all this was eminent in this Learned Native.

Next, we may take notice of a noble Δ between the ☉ and ♄, which Astrologers say imparts Honours and Dignities, and a Command over others. This worthy Native was Chancellor to the Queen of that Glorious Martyr King CHARLES the First, and died possessed of that Honour. And, I must observe further, He had, not onely Command over the Actions and persons of many men whilst alive, &c. but, being dead, yet speaketh, and thereby commands their Beliefs and Opinions to do homage to him, in his Excellent Works.

I had the Honour to be known to this great Friend and Patron of Arts and Sciences; and can assure the world, that never any Limner or Picture-maker did draw or paint the shape of any man more perfect and exact, then this Scheme of Heaven doth discover the person, inclinations, actions, and sufferings of this ever-honoured Knight.

He was a great Scrutator into the secrets of Astrology, and somewhat of his Experiments of that kinde, have I had the honour to see in the hands of that thrice-Honourable Lord, the present Earl of Bristol; which shewed him sufficiently acquainted with the study of the Stars.

If the Ascendant be Hylech in this Geniture, the Sun must be Alchocoden, or the giver of years. But because the Moon,

his

his Dispositrix, is in opposition of Mars, he cannot give his mean years fully, which are sixty and nine; that unhappy Beam cutting off five years compleat from that number. And sixty three years he did live, ending his life in Anno 1665, about the same time of the year in which he was born; his Death being ushered in with the ever-to-be-lamented (almost) depopulation of the most glorious City of the World, 100000 persons then dying of the Pestilence in that very year.

The Moon, but a little before his Death, was directed to the Quadrant of Saturn; it fell in the eighth House, viz. Dom. Mortis, and he Lord thereof. Such excellent persons cannot go to the shades like common people; but (as our Antipodian Kings) must have multitudes to bear them company.

In the Geniture of my Lord Bacon, the Sun was Hylech and Alchocoden both; but being in detriment, could not give his mean years fully; yet being Angular, brought this Honour'd Native within three years of it.

The Sun and Ascendant ad oppositum Martis, cum & sine Latitudine, brought imprisonment, and a Catastrophe of Honour and Office, &c. the same significators ad conjunctionem Saturni, & quadratum Veneris, brought Death.

In the Nativity of Mr. Selden, the Sun was Hylech and Alchocoden too, as in my Lord Bacon's, and there did give his mean years fully; because radically in Sextile of the Moon, and Trine of Mars: The Sun and Ascendant both, being then directed ad oppositum Lune, cum & sine Latitudine, and near the Cusp of the fourth House. And thus much for those three Honour'd persons Genitures.

Would the curious Reader know a reason why these Genitures happen to be published by me, beyond what I have given him already, which was for the honour and advance of the truth of Astrology, and advantage of grateful Artists? For if that had been all, another (had he been furnished with them) might have exposed them to publick view, as well as my self; nay, probably have done it much better, the Schemes as well as the persons, being excellently worthy.

But certainly there is a more then common sympathy that attends

Astrological Experiments. 1673.

tends the *actions* of *man*kind, as well as their *persons*; and accordingly, have I been long inclined to a performance of this service.

Sir Kenelm Digby had *Jupiter* in *Scorpio*, the *Horoscope* of my own *Nativity*, and *Mercury* on my *Medium Cæli*.

The Lord Bacon had *Venus* in his *Geniture*, on the place of the *Moon* in mine; and his *Moon* and *Jupiter* were in *Trine* to my *Medium Cæli*, and place of *Jupiter* also.

Mr. Selden had my *Horoscope* culminating in his *Radix*, and his *Mercury* was on my *Jupiter's* place, and his *Venus* was in *loco Solis, Mercurii, Veneris*, with me, and also in *Trino Martis*: His *Jupiter* was in *Trine* to mine, and to my *Medium Cæli* likewise. And thus you see the reason of my making these *Genitures* publick; and how that *Sympathy* hath prevailed with me.

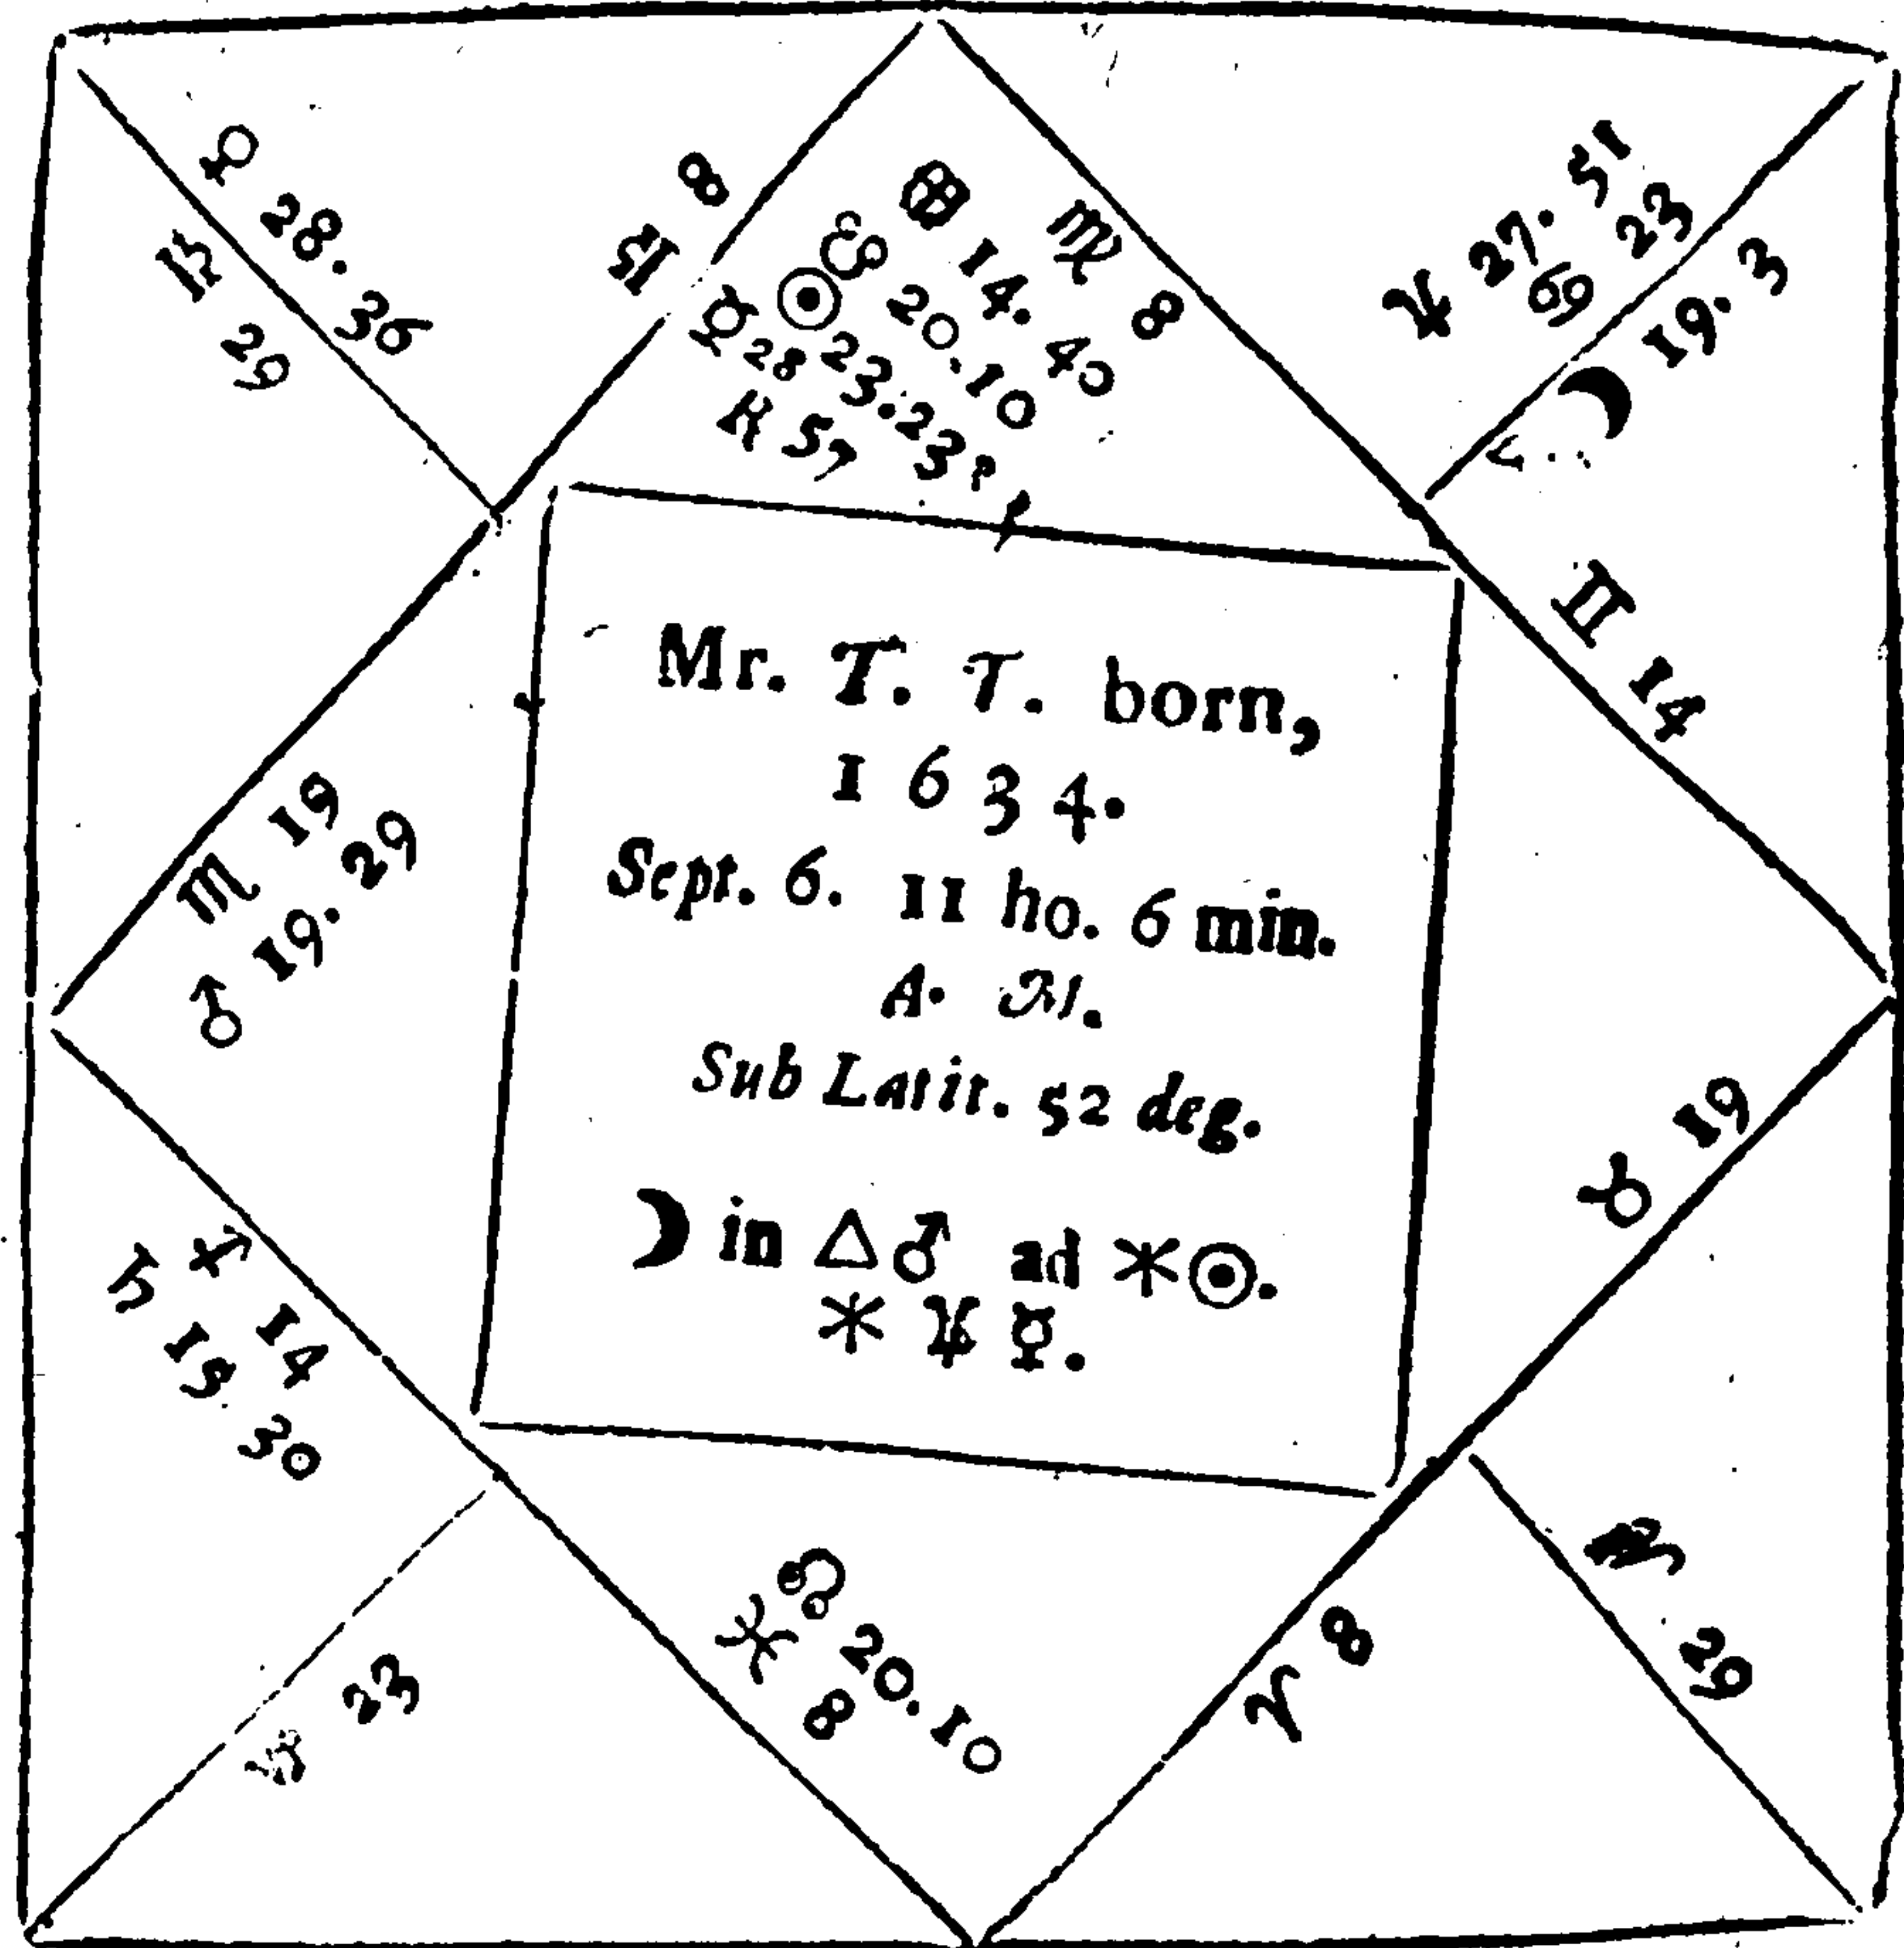

In this performance I have also made a great *Mystery* in *Astrology* publick; and, if rightly understood, have in this little (perhaps) said as much as either *Trapezuntius* or *Morine*, toward an *Explanation* of the 33 *Aphorisme* of *Ptolemy's Centiloquium*; which is this, "Ἡ φιλία καὶ τὸ μῖσος λαμβάνεται, &c. (i. e.) From the agreement or disagreement of the *Luminaries*, and the *signes* *Horoscopical* at the time of *Birth*, is truly discovered the love or hatred that shall be between persons.

'Tis to *Astrologers* that I have written this; and I should esteem it an happiness, were all my *Readers* such.

One experiment more, and (for this year) I have done: And in earnest, it is no despicable, but a remarkable one; and yet I have, for proof of the truth of *Starry influences*, above five hundred as eminent ones by me; many of which, I hope, in time, to meet an opportunity to produce, for the satisfaction of the *Enquirers* into *Cælestial Science*.

Mr.

Astrological Experiments. 1673.

The person whose *Nativity* this is, *Anno* 1662, came to me (he being then in a low and desponding condition; he was a *Feltmaker* by Trade, and then a *Journeyman* to that Profession) and acquainting me with the time of his *Birth*, desired my Opinion thereon, and directions therefrom, in some of his affairs, which at that time were not very great or considerable.

When I had considered his *Nativity*, and found it to be such an one as above expressed, I began to encourage him, and (*sub Deo*) to assure him, that things would succeed well unto him in a few years, and that better then he at present could expect; and bid him be confident, that the world would every way mend well with him, if that was his *Nativity* which he had brought me.

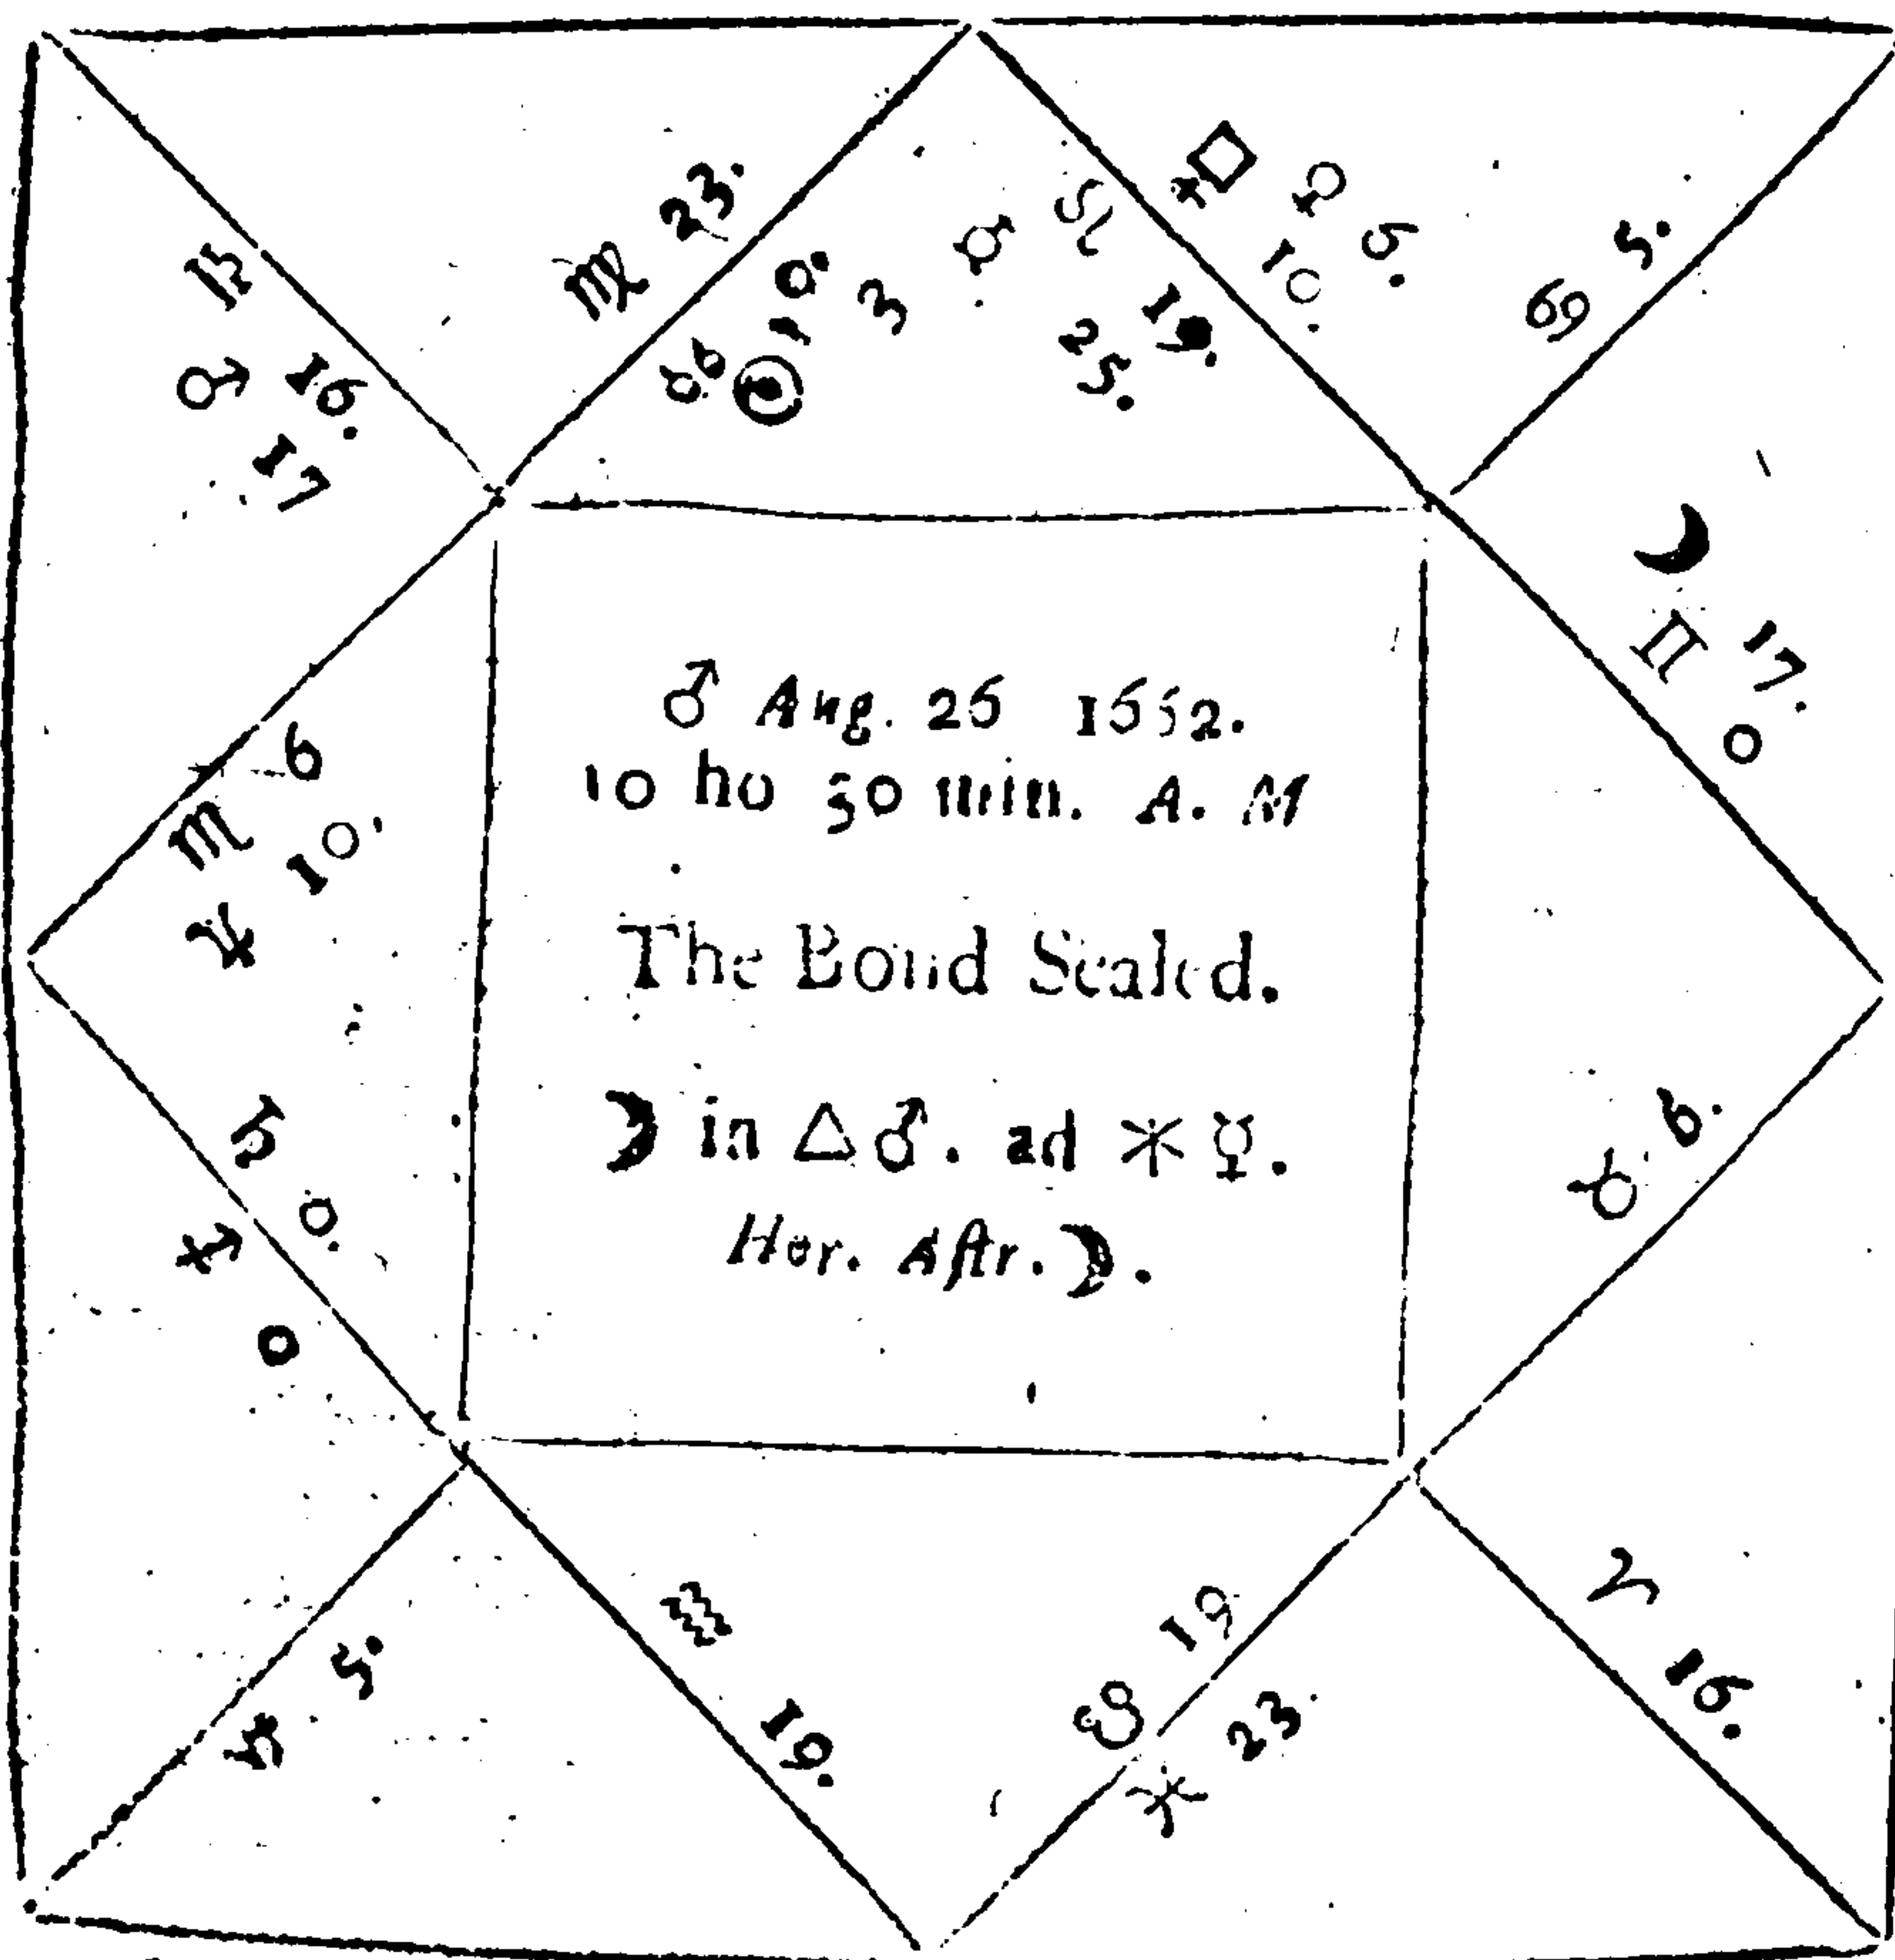

He

Astrological Experiments. 1673.

He could not, nor did he much credit me at that time. Perceiving his diffidence in my words, to be the same with the dependency he brought with him, I enquired again of him, if the time of his Birth he had given me was true? His answers, with circumstances observed therefrom, as person, shape, speech, &c. confirmed it to be the veritable time of his Birth.

And, (considering the strength of the Figure, it having not less than five Planets essentially dignified, a thing that happens in very few Genitures) I askt him merrily what he would give me for 2s. 6d. when he was worth 1000 l. He readily agreed to give me Bond for 20 l. when it should so be; which Bond he signed and sealed, Aug. 26. 1662. 10 ho. 30 min. A.M.

The Figure of Heaven being thus.

Now,

Astrological Experiments. 1673.

Now, I know, you long to hear the issue of this matter; and it was thus. It pleased God so to bleis this Native, in 8 years time, from Aug. 26. 1662, that he thought it convenient to take up his Bond: which he did, on Sept. 1. 1670, with some unthankful grumbling, although I abated him 10 l. which I have been told by persons skill'd in Law, that even Equity would have given. But I desire not to be troublesome in trivial matters.

The man is now living in Spittle-fields, London, where he is set up a Doctor, practising Physick; and hath, (to the honour of his Stars let it be remembred) built twelve very handsom houses there, (known by his own Name) inhabiting one of them himself.

Tres aut quatuor Planetæ in suis dignitatibus, dant divitias magnas, was the Aphorism that encouraged me to part with my Half-Crown: and, I have another and another to part with, upon the same or like consideration. I am not angry the man hath prospered; but rather pleas'd, that by his Nativity I have proved Astrologie true. But the next Bond of this nature that I take of any, I will not, in the Election, place ♀ upon the second house.

I offered him a Crown for another Bond, (when he should be worth 2000 l.) bearing penalty as the former. But he refused.

Let no modest or religious Reader mistake me; I do not produce these Experiments to evince a fatal necessity, (or to prove Astrologers infallible; for I must acknowledge often to have erred:) I agree, with the great Aquinas, that the Stars only incline, and not compel. And, if in this last Example, the man from such an obscure beginning, had arrived but to the happiness of 100 l. clear, it had been a good interpretation of his Stars toward him, quoad. (But then I had lost my Half-Crown.) The lesser wheels of a Clock, or Watch, have their Offices to perform, as well as the greater wheels; and, all operate together for the perfection of the motion to which they were originally designed.

So Industry and Ingenuity have their Influences and Significations, as well as the Stars. And, I do not desire to let light by, much less destroy, lesser causes, because I know there are greater. The God of the Stars is a God of Order, and hath wisely proportion'd every thing, both in the Greater and Lesser world, that they might be the more serviceable to the general end, viz. his own glory. For, The heavens declare the glory of God. Psal. 19. 1.

FINIS.

ADVERTISEMENT, &c.

MY Ephemerides for Ten years, is now Printed and sold by the Company of Stationers. And there is an Ephemerides of Fifty years, commencing where mine conclude, viz. 1682. almost ready for the Press; calculated by two ingenious Sons of Art, who are unwilling to have their Names known, until their own Works publish them. It will be an eminent Service performed for Astronomers, Astrologers, Navigators, Physicians, &c. and a particular Honour to the English Nation; as proving it to be Mercurial, as well as Martial.

A Philosophical Essay, touching the Doctrine of Petrification in the greater World; whence is discovered the Origine of all Bodies to proceed from Water and Seeds: being a Prodromus to a Medicinal Tract concerning the Causes and Cure of the Stone in the Kidneys and Blaaders of men. By Dr. Tho. Sherley, Physician in Ordinary to His Majestie. Printed for William Cadenman, at the Popes-head in the Lower Walk of the New Exchange London.

The Fiery Trigon revived, by the Five Oppositions of the two Superiour Planets, Saturn and Jupiter, in the years 1672, 1673. With an Astrological Discourse of their eminent Significations, as well to the Dutch, as other Nations. Printed for Josiah Robinson, at Lincolns-Inne-gate, next Chancery-lane.

The Astrological Sea-man: or, Experienced Directions for Merchants, Mariners, and all others that Trade or Voyage to Sea; assisting them in the prosperous beginning of Sea-voyages, Launching of Ships, Weighing Anchor, &c. Together with like Instructions, how (by Gods blessing) to avoid all Shipwrecks, and other disasters, usually happening in the Ocean. By the Author of this Book. Printed for, and sold by J. Robinson, at Lincolns-Inne-gate, next Chancery lane.

The Jamaica-Almanack, with a Calculation of the Nativity of that Noble Island for 180 years, &c. Printed for the Company of Stationers.
